This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices *Tradition, Transmission, Transformation* Ragep,2023-09-20 This volume is the outcome of two conferences held at the University of Oklahoma in 1992 and 1993 which dealt with issues of transmission and subsequent cultural transformations that occurred in the premodern histories of mathematics and science Some twenty contributors explore transmission from a variety of perspectives including the role of language and other facets of culture in the transmission process the interaction of popular and elite science in transmission successful and less than successful episodes of scientific appropriation and the role of institutions in this process The volume uses the theme of transmission as a way to focus debate on the perennial issue of the continuity and discontinuity of ideas in the history of sciences *Sundials* R.
