Sintering And Heterogeneous Catalysis:

Sintering and Heterogeneous Catalysis G. Kuczynski, 2012-12-06 The Sixth International Conference on Sintering and Related Phenomena took place at the University of Notre Dame Notre Dame Indiana June 6 8 1983 This conference was also the twentieth Conference on Ceramic Sciences organized yearly by a confederation of four institutions North Carolina University at Raleigh N C the University of California at Berkeley CA Alfred University at Alfred NY and the University of Notre Dame Notre Dame IN The papers presented at the last Notre Dame conference collected in this volume reflect the progress in our understanding of the process of sintering achieved in the past four years It seems that the analysis of the two particle models is finally extended to the analysis of the models of compacts In these investigations strong emphasis is put on pore grain boundaries interaction which appear to be central to this problem It is to be hoped that in the near future an adequate model of the compact will be developed which may serve as a useful basis of powder technology Also the effects of atmosphere on the sintering of ceramics after a long period of neglect seem to attract the attention of more workers in the field

Kuczynski, 2012-12-06 The proceedings of the 4th International Conference on Sintering and Related Phenomena contained in this volume have been broadened in scope to include the phenomena of sintering and coalescence of catalytic materials dispersed upon refractory oxides For it has long been recognized within the circles of chemists and chemical engineers working in the field of catalysis that one of the chief causes of the decline in heterogeneous catalytic activity and or selectivity is indeed sintering or perhaps using a better term coalescence of the supported catalytic metal and compounds thereof Essentially catalytic deactivation by sintering is now well recognized as Ostwald ripening which of course is a phenomenon familiar to scientists grappling with the problem of sintering of powder compacts The 4th Conference at Notre Dame marks the first occasion at which scientists and engineers of each discipline were assembled in the same room to exchange views on these phenomena of mutual concern In the wake of the Conference at Notre Dame all parties acknowledged the synergistic benefit which issued from this exchange both at the formal and informal level All were persuaded that signal benefits will be realized by a continuation of this collaboration in the form of future sintering conferences in which both powder metallurgists and catalytic scientists and engineers would participate 17th Annual Conference on Composites and Advanced Ceramic Materials, Part 2 of 2, Volume 14, Issue 9/10 John B.

Wachtman, 2009-09-28 This volume is part of the Ceramic Engineering and Science Proceeding CESP series This series contains a collection of papers dealing with issues in both traditional ceramics i e glass whitewares refractories and porcelain enamel and advanced ceramics Topics covered in the area of advanced ceramic include bioceramics nanomaterials composites solid oxide fuel cells mechanical properties and structural design advanced ceramic coatings ceramic armor porous ceramics and more
