Smoking and Hormone-related Disorders Nicholas J. Wald, John Baron, 1990 The subject of the hormone disorders associated with smoking are of relatively recent interest This book provides summaries of the present status of research into the effects of smoking the apparent protection offered against certain diseases and suggested ways of predicting trends of disease patterns Not all the disorders discussed are adverse effects of smoking providing impetus for developing non tobacco methods of disease prevention *Changes in Cigarette-related Disease Risks and Their Implication for Prevention and Control*, 1997 **Reproductive Toxicology, Second Edition** J Witorsch Raphael, 1995-06-30 Presents not only the major principles and current issues in the field but also provides a physiologic basis for the actions and reactions to reproductive toxic agents The volume is divided into three sections The first focuses on the current concepts of normal mammalian reproductive function from the systems to subcellular level The second explains how toxic substances disrupt the normal functioning of elements of the mammalian reproductive system The third section discusses other issues of long standing or recent interest to the field such as clinical aspects epidemiology and the toxic effects of low energy electromagnetic fields and tobacco alcohol and other substances of abuse Annotation copyright by Book News Inc Portland OR **The Tobacco Epidemic** C. T. Bolliger, K. O. Fagerström, F.J.F. Herth, 1997-10-20 Today it is a well established fact that cigarette smoking is fundamentally a form of addiction to the drug nicotine However this does not mean that smoking can entirely be explained in terms of pharmacological factors as with any drug addiction social economic personal and political influences all play an important part in determining patterns of prevalence and cessation This publication provides a comprehensive up to date review of tobacco smoking Written by internationally acknowledged experts the 15 chapters of the book cover the history economics epidemiology and psychology of tobacco use The medical consequences of both active and passive smoking are discussed in detail and the pharmacological and behavioral aspects of nicotine dependence are highlighted Several chapters focus on smoking cessation examining patterns and predictors of cessation in the general population and the role of GPs nurses and pharmacists and evaluating nicotine replacement therapy and other drugs as well as the role of smokeless tobacco Measures to prevent smoking such as smoke free environments advertising bans and price increases are also considered Finally recommendations are given to change legislation concerning tobacco products in order to most effectively reduce the harm associated with nicotine use This book is a must for anyone in the medical profession interested in smoking related issues Due to its easy readability and topicality it will also appeal to nonmedical readers A Karger Publishing Highlights 1890 2015 title **How Tobacco Smoke Causes Disease** United States. Public Health Service. Office of the Surgeon General, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke Many Surgeon General s reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies Mechanisms of disease are important because they may provide

plausibility which is one of the guideline criteria for assessing evidence on causation This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke This evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products

Health effects of exposure to environmental tobacco smoke, 1999 In response to rapidly accumulating evidence that environmental tobacco smoke ETS exposure causes disease beyond lung cancer exposure measurement developmental toxicity I perinatal manifestations developmental toxicity II postnatal manifestations reproductive effects respiratory health effects carcinogenic effects cardiovascular effects Dozens of tables figures **The Health**

Consequences of Smoking United States. Public Health Service. Tobacco Smoke and Involuntary Smoking IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, World Health Organization, International Agency for Research on Cancer, 2004 The IARC Monographs series publishes authoritative independent assessments by international experts of the carcinogenic risks posed to humans by a variety of agents mixtures and exposures They are a resource of information for both researchers and national and international authorities This volume is particularly significant because tobacco smoke not only causes more deaths from cancer than any other known agent it also causes more deaths from vascular and respiratory diseases This volume contains all the relevant information on both direct and passive smoking It is organised by first looking at the nature of agent before collecting the evidence of cancer in humans This is followed by carcinogenicity studies on animals and then any other data relevant to an evaluation
