

done in favor of the L-shaped mortise, but for the first time a locking clasp was added, similar to the one introduced by the French in 1777. It should be noted that the American M1835 is always marked with a US on the ricasso. This is a particularly important point because of their similarity to the Belgian Model 1841 and the French Model 1822.

Besides the distinctive US, the ricasso is about half the length (about .75 inches) of the Belgian M1841. In addition, the terminus of the US M1835 is rounded, whereas the Belgian M1841 and the French bayonets have a much less pronounced arch (*figure 1-11.D*).

The M1841 bayonet is in every way the same as the M1835 with one obvious exception — the introduction of the coffin shaped shoulders (*fig-*

ure 1-12.D). This feature is characteristic of all American socket bayonets manufactured from 1841 until the introduction of the Krag knife bayonet in 1892.

United States Model 1851 Cadet

Figure 1-13. United States Model 1851 Cadet

Companion Arm: US Model 1851 Cadet Musket

PIF: split locking clasp in which the guide pin slides

Generally speaking, cadet models resemble their larger standard issue cousins. However, the M1851 is the exception to that rule. Aside from its small size, it is easily recognized by the unusual locking ring, which has a slot in which the clasp pin slides. Instead of pivoting between a ferrule and clasp pin, it is positioned between two ferrules that act as guides. Only one other socket bayonet is known that incorporates the split locking clasp. It was produced in Denmark, some time after 1794 (*figure 6-2.D*). The bridged L-shaped mortise is configured for a bottom mounted bayonet stud. The long, round shank is nearly vertical with only a slight forward curve. The shoulders are coffin shaped like most US bayonets after 1841.
