Sodium-calcium Exchange T. Jeff A. Allen, Denis Noble, Harald Reuter, 1989 This introduction to the role of sodium calcium exchange in calcium homeostasis contains a series of articles written by leading scientists which cover such topics as sodium calcium exchange in intact cells in photoreceptors and in sodium transporting epithelia

Sodium-calcium Exchange and the Plasma Membrane [...] in Cell Function André Herchuelz, 2007 **Role of Sodium-calcium Exchange in Cardiac Physiology and Pathophysiology** Cecilia Hurtado, 2005 **Calcium and the Cell** David Evered, Julie Whelan, 2008-04-30 This collection of presentations from the Ciba Foundation Symposium of 1985 deals with the central role of calcium in intracellular processes Discusses control of intracellular calcium as well as control by intracellular calcium covering such topics as muscle contraction metabolic processes hormone and transmitter secretion membrane transport and permeability cellular architecture and growth and the possible contribution of calcium gradients to early embryonic development Includes carefully edited and extensive almost half the book discussions of chapter topics between active workers in the field at the end of each chapter

Calcium Transport and Intracellular Calcium Homeostasis Danielle Pansu, Felix Bronner, 2013-06-29 The crucial role played by calcium as a cellular messenger has become increasingly evident as has the recognition that cells spend much energy in maintaining the cytosolic concentration of this cation both constant and low It is thought they do this to avoid precipitating phosphate needed as a source of bond energy and to modulate protein structure Moreover since calcium that does enter the cell must be disposed with processes that utilize calcium have evolved e g secretion contraction signaling to name just some New knowledge concerning the processes of cellular calcium entry extrusion and the fate of intracellular calcium has accumulated in recent years Much has also been learned about calcium transport by and across epithelial cells It seems logical to think that the processes of calcium entry extrusion and intracellular handling are similar in all cells We have therefore assembled in one volume overviews and research reports of transport and cellular calcium regulation so as to explore similarities and differences between cells that utilize calcium for metabolic purposes and those whose primary function is transport

Intracellular Calcium Regulation Hermann Bader, 1986 *Essential Cardiology* Clive Rosendorff, 2007-11-05 A panel of leading researchers and clinician scientists distill from years of practical experience and recent scientific and clinical advances the essence of cardiology principles and techniques today In this second edition all of the original chapters have been extensively rewritten and two new chapters on acute coronary syndromes following the modern classification have been added one on unstable angina pectoris and non ST segment elevation myocardial infarction and the other on ST segment elevation

myocardial infarction Compact yet comprehensive Essential Cardiology Principles and Practice Second Edition offers today's busy cardiology and internal medicine practitioners cardiology fellows and medical residents rapid access to the latest ideas and techniques needed for today's gold standard diagnosis and management of cardiac patients

Calcium as a Cellular Regulator Ernesto Carafoli, Claude B. Klee, 1999 Encompassing all aspects of calcium signalling from methods of measuring calcium in cells to the molecular mechanisms for decoding its information this comprehensive book balances historical aspects and state of the art developments

Calcium in Drug Actions Peter F. Baker, 2012-12-06 The Editorial Board and the Publishers of the Handbook of Experimental Pharmacology wish to express their profound grief at the untimely death of Professor Peter Baker Aware of his international recognition as an expert on the ubiquitous role of calcium in physiological processes and their pharmacological control the Board was gratified when Professor Baker accepted its invitation to edit a new Handbook volume on Calcium in Drug Actions He went about this task with his usual energy and effectiveness so that in the few months before his unexpected death Professor Baker had mustered his distinguished contributors got them to provide their manuscripts and seen almost the entire material into the press This achievement is all the more remarkable when one bears in mind the extraordinary number of his other commitments during the same time they are mentioned in Sir Alan Hodgkin's preface to this volume With so many other professional and personal responsibilities upon him the Board of the Handbook wishes to record its grateful appreciation for the admirable way in which Professor Baker took on and carried out the additional work of bringing this fine book into existence and the Board wishes it to be dedicated to the memory of Professor Peter Frederick Baker The Editorial Board G V R BORN P CUATRECASAS H HERKEN A

Cellular Ca²⁺ Regulation D. Pfeiffer, 2012-12-06 This book arose from a meeting held at the University of Washington Seattle in July of 1986 The meeting was a satellite symposium of the XXXth International Congress of Physiological Sciences which occurred in Vancouver Canada at that time

2 Adjustments in the cytoplasmic Ca concentration of cells occur in response to a variety of external signals These fluctuations are a central component of one mechanism by which cells adapt their activities to changes in the external environment and to the requirements of whole body

2 homeostatic mechanisms It is now clear that redistribution of Ca within 2 intracellular compartments as well as changes in the rates of Ca influx and extrusion at the whole cell level occur during signal dependent

2 changes in the cytoplasmic Ca concentration In summarizing current research in this area this volume considers first the properties of individual cation transporting activities located in various cell membranes It then moves to the cellular level where the consequence of individual transporting activities acting in concert is examined

Ion Pumps, Part A J.P. Andersen, 1997-11-19 Both eukaryotic and prokaryotic cells depend strongly on the function of ion pumps present in their membranes The term ion pump synonymous with active ion transport

system refers to a membrane associated protein that translocates ions uphill against an electrochemical potential gradient. Primary ion pumps utilize energy derived from chemical reactions or from the absorption of light while secondary ion pumps derive the energy for uphill movement of one ionic species from the downhill movement of another species. In the present volume various aspects of ion pump structure, mechanism and regulation are treated using mostly the ion transporting ATPases as examples. One chapter has been devoted to a secondary ion pump, the Na⁺/Ca²⁺ exchanger, not only because of the vital role played by this transport system in regulation of cardiac contractility but also because it exemplifies the interesting mechanistic and structural similarities between primary and secondary pumps.

Nutritional Prevention of Cardiovascular Disease Walter Lovenberg, Yukio Yamori, 2013-10-02. Nutritional Prevention of Cardiovascular Disease presents studies on the important role of nutrition in cardiovascular disease. The book contains 37 chapters organized into four parts. Part I contains papers on experimental approaches to nutritional prevention of cardiovascular disease. These include studies on cellular mechanisms relating salt to hypertension, salt sensitivity in experimental animals and man, and the relationship between nutrition and cardiovascular disease in experimental animals. Part II presents epidemiological studies of regional differences in cardiovascular disease and dietary risk factors. These include coronary heart disease trends in Japan linked to dietary alterations, blood pressure and dietary factors among farmers in northern and southern China, and dietary factors of hypertension. Part III focuses on clinical studies in nutritional prevention of cardiovascular disease. Topics covered include the role of dietary fat in regulating blood pressure and the effects of diet in mild hypertension. Part IV deals with dietary intervention for prevention of cardiovascular disease.

Included are such receptor superfamilies as G proteins, immunoglobulins, ligand-gated receptors, interleukins and tyrosine kinases, as well as such transporter protein families as pumps, ion channels and bacterial transporters. Each section of each volume features a perspectives commentary chapter which includes comments on the recent advances and predictions on new directions. Written by acknowledged experts in the field, this volume highlights recent developments in pumps, channels and transporters. The latest on several important protein families including the G protein-coupled receptors, the interleukin receptors, sugar transporters, several ion channels and pumps.
