Artificial Intelligence Applications for Improved Software Engineering Development: New Prospects Meziane, Farid, Vadera, Sunil, 2009-07-31 This book provides an overview of useful techniques in artificial intelligence for future software development along with critical assessment for further advancement Provided by publisher Human-Centered Software Engineering Ahmed Seffah, Jean Vanderdonckt, Michel C. Desmarais, 2009-06-19 Activity theory is a way of describing and characterizing the structure of human activity of all kinds First introduced by Russian psychologists Rubinshtein Leontiev and Vigotsky in the early part of the last century activity theory has more recently gained increasing attention among interaction designers and others in the human computer interaction and usability communities see for example Gay and H Brooke 2004 Interest was given a significant boost when Donald Norman suggested activity theory and activity centered design as antidotes to some of the putative ills of human centered design Norman 2005 Norman who has been credited with coining the phrase user centered design suggested that too much attention focused on human users may be harmful that to design better tools designers need to focus not so much on users as on the activities in which users are engaged and the tasks they seek to perform within those activities Although many researchers and practitioners claim to have used or been influenced by activity theory in their work see for example Nardi 1996 it is often difficult to trace precisely where or how the results have actually been shaped by activity theory In many cases even detailed case studies report results that seem only distantly related if at all to the use of activity theory Contributing to the lack of precise and traceable impact is that activity theory spite its name is not truly a formal and proper theory

Wasserman, P. Freeman, 2012-12-06 Software engineering is a term which was coined in the late 1960 s as

the theme for a workshop on the problems involved in producing software that could be developed economically and would run reliably on real machines Even now software engineering is more of a wish than a reality but the last few years have seen an increased awareness of the need to apply an engineering type discipline to the design and construction of software systems Many new proposals have been made for the management of software development and maintenance and many methodologies have been suggested for improving the programming process As these problems and solutions become better understood there is a growing need to teach these concepts to students and to practicing professionals As a prelude to the educational process it is necessary to gain an understanding of the software design and development process in industry and government to define the appropriate job categories and to identify the fundamental content areas of software engineering The need for quality education in software engineering is now recognized by practitioners and educators alike and various educational endeavors in this area are now being formulated Yet discussions we had had over the past year or so led us to believe that there was insufficient contact between practitioners and educators with the resultant danger that each group would go off in separate ways rather than working together

Knowledge-Based Software Engineering M. Virvou, T. Issues in Software Engineering Education Richard Fairley, Peter Freeman, 2012-12-06 This volume combines the proceedings of the 1987 SEI Conference on Software Engineering Education held in Monroeville Pennsylvania on April 30 and May 1 1987 with the set of papers that formed the basis for that conference The conference was sponsored by the Software Engineering Institute SEI of Carnegie Mellon University SEI is a federally funded research and development center established by the United States Department of Defense to improve the state of software technology The Education Division of SEI is charged with improving the state of software engineering education This is the third volume on software engineering education to be published by Springer Verlag The first *Software Engineering Education Needs and Objectives* edited by Tony Wasserman and Peter Freeman was

published in 1976 That volume documented a workshop in which educators and industrialists explored needs and objectives in software engineering education The second volume Software Engineering Education The Educational Needs of the Software Community edited by Norm Gibbs and Richard Fairley was published in 1986 The 1986 volume contained the proceedings of a limited attendance workshop held at SEI and sponsored by SEI and Wang Institute In contrast to the 1986 Workshop which was limited in attendance to 35 participants the 1987 Conference attracted approximately 180 participants
