Interactions of Energy and Climate W. Bach, J. Pankrath, J. Williams, 2012-12-06 Since the beginning of industrialization in the last century a steady increase in energy consumption can be observed At the same time energy

generation switched from wood and coal to predominantly oil coal and natural gas Soon many countries became aware of the fact that the resources of fossil fuels especially of oil and natural gas are finite Diversification of energy sources became a requirement for the future Governments expressed their concern by setting up natural energy programmes while international organisations undertook assessments of the global energy resources and possible rates of supply and substitution When it comes to setting up energy policies the following factors must be taken into consideration population growth level and nature of socio economic activity the costs of energy the adequacy and reliability of supply the availability of technology and supporting infrastructure the success of energy conservation programmes and concern about the environment safety aspects of production and use of energy as well as educational efforts toward a rational use of energy When we express our most urgent concern the long term global energy provision experts offer four interrelated partial strategies the strategy of rational use and conservation of energy the strategy of using renewable energy sources the coal strategy including coal gasification and liquefaction the nuclear power strategy Any strategy however for securing future energy supply has from my point of view to be thoroughly examined as to its impact on the environment
