Soft Tissue Sarcomas In Adults:

Soft Tissue Sarcomas in Adults M. Bamberg, W. Hoffmann, D.K. Hossfeld, 2012-12-06 Sarcomas represent a group of rare tumors which arise from the largest tissue compartment of the body but account only for about 1 % of all malignancies Among this group of tumors soft tissue sarcomas in adults are in addition to osteosarcomas the most important In the diagnostic workup of soft tissue sarcomas modern radiological investigation methods such as CT and MRI techniques are being critically evaluated While it is widely accepted that the conventional stained microscopic specimen is still the cornerstone for properly planned treatment strategies immunohistochemistry has come to play an indispensable role in accurate classification Reviewing the surgical techniques the treatment of musculo skeletal malignancies especially of soft tissue sarcomas has changed considerably over the past decades While amputation used to be the surgical treatment of choice limb saving procedures have now become an important therapeutic modality in treating such lesions particularly in combination with percutaneous or interstitial radiotherapy Despite adequate local treatment many patients with soft tissue sarcomas will ultimately develop metastatic disease usually in the lungs For this reason effective adjuvant systemic treatment should be given simultaneously with or soon after treatment of local disease The results of several randomized trials evaluating adjuvant chemotherapy have been reported in the meanwhile indicating improved disease free survival with a trend towards improved overall survival In disseminated disease drug combinations or single agents are used as palliative treatment and might help to improve survival in selected subgroups

Recent Results in Cancer Research, 1995 **Soft Tissue Sarcomas** Laurence H. Baker, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in-depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
