**Solar Activity Observations and Predictions** Patrick S. McIntosh, Murray Dryer, 1972      Solar-terrestrial Predictions Proceedings: Solar activity predictions Richard Frank Donnelly, 1979      Solar activity reports Richard Frank Donnelly, 1979

*Solar-terrestrial Predictions Proceedings: Working group reports and reviews* Richard Frank Donnelly, 1979      **The Solar Activity Cycle** André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun s convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1 4 2014

Working group reports and reviews Richard Frank Donnelly, 1979      Analysis of occurrence of sporadic E and accuracy of predictions of sporadic-E critical frequencies for temperate latitude northern hemisphere stations Pamela Gosnell, Margo Leftin, 1976      *Spacecraft Environments Interactions* William W. Vaughan, 1996      **Ionospheric**

**Predictions** Institute for Telecommunication Sciences, 1970      **Ionospheric Predictions for ...**, 1971      **The Prediction of Ionospheric Conditions** G.S. Ivanov-Kholodny, A.V. Mikhailov, 2012-12-06 The ionosphere of the Earth has been actively studied since the 1920 s following the discovery of ground radio sounding By means of this method results were obtained by an international network of ionospheric stations in particular by the successful implementation of a number of rigorously planned international scientific research programs enabling the collection of extensive experimental material on some of the most important parameters of the ionosphere the critical frequencies of E F1 and F2 layers Comprehensive analyses of these observation data give a fairly complete picture of the various changes taking place in the principal ionospheric layers at

different points on our globe Another important aspect of the study of the ionosphere which has been in progress for the past three decades is an extensive program of in situ determinations of the various physical parameters first using rockets and subsequently artificial satellites The data thus obtained on the principal ionizing agent short wave solar radiation and on the physical conditions prevailing in the upper atmosphere and in the ionosphere at different altitudes allow the proposal of a self consistent mechanism of ionosphere formation A general outline of the theory of ionosphere formation at different altitudes is now complete Its application to specific cases dependent on a more accurate determination of input parameters to give solutions valid for a definite set of conditions etc is yet to be accomplished The use of artificial satellites in cosmic research yielded abundant scientific data

*Prediction of Total Electron Content Using the International Reference Ionosphere* L. F. McNamara, 1983 The International Reference Ionosphere IRI is a model of the ionosphere based on experimental data that has been proposed as a standard ionospheric model As such it should be tested extensively to determine its range of validity One of the ways in which the electron density profile given by the IRI especially above the peak of the F layer can be tested is to compare calculated and observed values of total electron content TEC We have therefore studied the discrepancies between calculated and observed values of TEC recorded at 15 stations covering a wide range of longitudes and latitudes mainly in the northern hemisphere and mainly for high levels of solar activity We have found that the IRI produces reasonably accurate values of TEC at mid and high latitudes but that it greatly underestimates the daytime values of TEC at low latitudes We conclude therefore that the daytime electron density profile given by the IRI is reasonably accurate at mid and high latitudes at least above the peak of the F2 layer The situation at low latitudes clearly requires more work and we have suggested two possible lines of study The generally low discrepancies at night indicate that the nighttime electron density profiles given by the IRI correspond fairly closely to the actual profiles

*Solar-geophysical Data*, 1983      **Compilations of Solar-geophysical Data**, 1978      **Solar Flare Prediction** C. Sawyer, James W. Warwick, J. T. Dennett, 1986 This study looked at observational and theoretical studies of flare physics at quests for flare precursors and at mathematical models for combining masses of predictive information We also looked at the worldwide effort to gather and share timely data and combine it with knowledge and experience to forecast solar flares and their effects Topics include Long lived large scale magnetic and velocity fields Magnetic energy buildup in an active region Flare initiation Flare precursors Filament activation Preflare brightening Magnetic shear and Emerging and cancelling magnetic flux Quantitative prediction Operational solar flare prediction Forecast evaluation      **OT Report** United States.
