Heathcote,2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained The Story of Light Science Dennis F. Vanderwerf,2017-08-06 This book traces the evolution of our understanding and utilization of light from classical antiquity and the early thoughts of Pythagoras to the present time From the earliest recorded theories and experiments to the latest applications in photonic communication and computation the ways in which light has been put to use are numerous and astounding Indeed some of the latest advances in light science are in fields that until recently belonged to the realm of science fiction The author writing for an audience of both students and other scientifically interested readers describes fundamental investigations of the

nature of light and ongoing methods to measure its speed as well as the emergence of the wave theory of light and the complementary photon theory The importance of light in the theory of relativity is discussed as is the development of electrically driven light sources and lasers The information here covers the range of weak single photon light sources to super high power lasers and synchrotron light sources Many cutting edge topics are also introduced including entanglement based quantum communication through optical fibers and free space quantum teleportation and quantum computing The nature and use of squeezed light e g for gravitational wave detection is another fascinating excursion as is the topic of fabricated metamaterials as used to create invisibility cloaks Here the reader also learns about the realization of extremely slow speed and time reversed light The theories experiments and applications described in this book are whenever possible derived from original references The many annotated drawings and level of detail make clear the goals procedures and conclusions of the original investigators Where they are required all specialist terms and mathematical symbols are defined and explained The final part of the book covers light experiments in the free space of the cosmos and also speculates about scenarios for the cosmological origins of light and the expected fate of the photon in a dying universe *The Story of Space Station Mir* David M. Harland, 2007-12-26 Details how a succession of Salyut space stations led to the development of Mir Depicts Mir's assembly piece by piece in space between 1982 and 1996 Describes how Mir became an international research laboratory Advises how Mir technology went on to form the core modules of the ISS The definitive account of Mir throughout its life through to de orbiting in March 2001 **How Globes are raised and moved: or the Creation story considered under the laws of light and motion** Edward DINGLE, 1868 **The Story of Gaia** Jude Currivan, 2022-11-01 Explores how the Universe our planet ourselves and everything in existence has inherent meaning and evolutionary purpose 2023 Nautilus Gold Award Examines our emergence as self aware members of a Universe that is itself a unified and innately sentient entity that exists TO evolve Shares leading edge scientific breakthroughs and shows how they support traditional visions of Earth as a living being Gaia Rewrites evolution as not driven by random occurrences and mutations but by intelligently informed and meaningful information flows and processes Exploring our emergence as self aware members of a planetary home and entire Universe that is a unified and innately sentient entity Jude Currivan Ph D shows that mind and consciousness are not what we possess but what we and the whole world fundamentally are She reveals our Universe as a great thought of cosmic mind manifesting as a cosmic hologram of meaningful information that vitally exists to evolve Sharing scientific breakthroughs the author details the 13.8 billion year story of our Universe and Gaia where everything in existence has inherent meaning and evolutionary purpose Showing how the Universe was born not in an implicitly chaotic big bang but as the first moment of a fine tuned and ongoing big breath she shares the latest evidence for the innate sentience that has guided our universal journey from simplicity to ever greater complexity diversity and self awareness from protons to planets plants and people She explains how evolution is not driven by random occurrences and mutations but by profoundly resonant and harmonic

interplays of forces and influences each intelligently informed and guided In Gaia the Universe s evolutionary impulse is embodied in collaborative relationships and dynamic co evolutionary partnerships on a planetary scale and as a wholistic gaiaosphere She reveals how the conscious evolution of humanity is an integral part of Gaia s own evolutionary progress and purpose By perceiving and experiencing our planet as a sentient being and ourselves as Gaians we open ourselves to a deeply ecological evolutionary and above all hopeful worldview *The Story of Heavens* Ball,1886 *The Story of the Heavens* Robert Stawell Ball,1890 **The Story of the Heavens** sir Robert Stawell Ball,1901 *Time, Space, Stars And Man: The Story Of The Big Bang (2nd Edition)* Michael Mark Woolfson,2012-11-29 The three greatest scientific mysteries which remain poorly understood are the origin of the universe the origin of life and the development of consciousness This book describes the processes preceding the Big Bang the creation of matter the concentration of that matter into stars and planets the development of simple life forms and the theory of evolution that has given higher life forms including mankind There are many popular and excellent science books that present various aspects of science However this book follows a narrow scientific pathway from the Big Bang to mankind and depicts the causal relationship between each step and the next The science covered will be enough to satisfy most readers Many important areas of science are dealt with and these include cosmology particle physics atomic physics galaxy and star formation planet formation and aspects of evolution The necessary science is described in a narrative form that general interest readers should understand without the use of equations or formulae This 2nd edition includes several updates on the subjects that form the pillars of this book They are cosmology and astronomy the features and formation of the solar system the origin of life and genetics and evolution This book will appeal to readers with an interest in biology and those curious about the origins of the universe **Young Peoples Story of the Creation** Balbir Sandhu,2019-08-23 This book is an inspirational science book with biblical content for both young adults and mature readers who want an insight into the general background on the science of creation of the planets and specifically of planet Earth and the life on it Starting with a brief discussion of the visible universe the galaxies including our own Milky Way galaxy of which our Sun is one of the stars two full chapters are devoted to our solar system the Sun and the nine planets Our knowledge of each planet as obtained from American and Russian space probes is presented in detail ruling out the possibility of life anywhere in the vast expanse of the universe except on the planet Earth Then two full chapters is presented on the detailed discussion of all physical features of our own spaceship Mother Earth the home of presently over seven billion children of Adam and Eve which had been the abode of our long gone ancestors for millions of years Various theories on the formation of Earth and the planets are presented Most importantly about half of the book is devoted to the science of life on Earth including various theories about the origin of life Finally a great deal of discussion is devoted to Darwin s theory of evolution 1859 which had been proven to be speculative and erroneous by many scientists a conclusion verified by this writer *Daytime Star, the Story of Our Sun* Simon Mitton,1983 **The Story of Astronomy** Lloyd

Motz,Jefferson Hane Weaver,2013-11-11 *Mind The Gap: The Labyrinthine Story Of Planetary Orbits, Mathematics, And The Titius-bode Rule* Martin Beech,2023-08-15 This book is concerned with two tightly knit topics those of mathematics and astronomy Its focus is primarily concerned with planetary astronomy and specifically the history of accounting for the spacing of planetary orbits The story begins with the ancient Greek philosophers and continues to the modern era and the new data being gleaned from the study of exoplanetary systems Throughout the text the manner in which mathematical theory has been used to decipher and impose order upon the solar system will be examined Attention and discussion will be directed towards the so called Titius Bode rule a long standing ordering principle that in fact it has no physical underpinning or explanation The story presented will look at how humanity has learned about the workings of the solar system and it will look at the philosophical problems that arise when mathematical exposition leads observation Furthermore the fundamental role of mathematics in the development of physical theory is examined and it is argued that there are some gaps in our knowledge of the solar system and the universe that mathematics and physical theory will never successfully bridge The text will present material at the informed amateur scientist university undergraduate student level The Story of CO₂ Geoffrey Ozin,Mireille Ghoussoub,2020-11-03 The climate crisis requires that we drastically reduce carbon dioxide emissions across all sectors of society The Story of CO₂ contributes to this vital conversation by highlighting the cutting edge science and emerging technologies a number of which are already commercially available that can transform carbon dioxide into a myriad of products such as feedstock chemicals polymers pharmaceuticals and fuels This approach allows us to reconsider CO₂ as a resource and to add carbon capture and use to our other tools in the fight against catastrophic climate change The Story of CO₂ explores all aspects of carbon dioxide from the atomic to the universal perspective and takes the reader on an epic journey into our physical world starting from the moment of the Big Bang all the way to the present world in which atmospheric CO₂ concentrations continue to grow This story seeks to inspire readers with the latest carbon utilization technologies and explain how they fit within the broader context of carbon mitigation strategies in the shift towards a sustainable energy economy **The Story of Innovation** James Trefil,2017 Documenting the interconnectedness among the crucial milestones of our time and illustrated with full color photography a comprehensive tour of modern science and technology explores the most important innovations and inventions in engineering physics medicine chemistry biology and more Publisher s description
