Solar Coronal Structures International Astronomical Union. Colloquium, 1994 **Multi-Wavelength Observations of Coronal Structure and Dynamics** Penny Martens, D. Cauffman, 2002-10-21 These are the Proceedings of the Yohkoh 10th Anniversary Meeting a COSPAR Colloquium held in Kona Hawaii USA on January 20-24 2002 The title of the meeting was Multi Wavelength Observations of Coronal Structure and Dynamics In these proceedings the many and varied advances of the dynamics solar atmosphere in the past ten years of observations by Yohkoh have been reviewed **The Magnetic Structures and Their Role in The Evolution of Coronal Mass Ejections** Qiang Hu, Hongqiang Song, Hengqiang Feng, 2022-02-09 *Coronal Magnetometry* Sarah E. Gibson, Laurel A. Rachmeler, Stephen M. White, 2017-07-11 Magnetism defines the complex and dynamic solar corona It determines the magnetic loop structure that dominates images of the corona and stores the energy necessary to drive coronal eruptive phenomena and flare explosions At great heights the corona transitions into the ever outflowing solar wind whose speed and three dimensional morphology are controlled by the global coronal magnetic field Coronal magnetism is thus at the heart of any understanding of the nature of the corona and essential for predictive capability of how the Sun affects the Earth Coronal magnetometry is a subject that requires a concerted effort to draw together the different strands of research happening around the world Each method provides some information about the field but none of them can be used to determine the full 3D field structure in the full volume of the corona Thus we need to combine them to understand the full picture The purpose of this Frontiers Research Topic on Coronal Magnetometry is to provide a forum for comparing and coordinating these research methods and for discussing future opportunities
