Solar Energy Application In The Tropics:

Solar Energy Applications in the Tropics B.B.P. Lim, 2012-12-06 Renewable energy sources such as solar energy were advocated even before the energy crisis in 1973. Subsequent development in solar energy has been remarkable. Indeed, it has been one of the most studied and researched topics in recent years. Much of the technology in the utilization of solar energy has been associated with housing and industrial applications and to a smaller extent with commercial use. The nature of the utilization has been related to the philosophy of independence or autonomy in that each housing or industrial unit is made self-sufficient by the installation of solar energy equipment. The general aim of the development of solar energy has been to substitute existing energy sources by solar energy, especially among the developed countries in the temperate regions. In developing countries, the application of solar technology has been more acceptable in rural areas where conventional infrastructure is underdeveloped. A different direction is necessary for the development of solar energy in urban areas. Buildings are interrelated and have been dependent on the conventional infrastructure. The consumption of energy is many times more than that in the rural areas. A new approach to urban development must be generated and studies should be made on the feasibility and viability of using solar energy for urban settlements.

Clean Energy Opportunities in Tropical Countries Shaharin A. Sulaiman, 2021-01-21 This book highlights the present scenario of energy demand and power generation technologies in tropical countries. The tropics are well known to receive direct sunlight. Furthermore, different than four-season countries, tropical countries have a continuous summer-like season and therefore they are rich in clean energy sources like solar and biomass. Home to 40% of the world's population, the demand for energy in these countries keeps increasing. With the present serious global concern on the environment, the choice of power generation is no doubt the cleanest possible resource. This book delves into the opportunity that various tropical countries have in pursuing environmentally friendly power generation systems.

Energy and Environment in the Tropics Shaharin Anwar Sulaiman, 2022-11-21 The tropical zones are dominated by developing countries which mainly face problematic environmental issues. Different than four-season countries, tropical countries have a continuous summer-like season and therefore they are rich in clean energy sources like solar and biomass. Hence, the mitigations of environment and energy issues in the tropics would require specific understanding and different approach to solutions. This book offers an assortment of studies on scenarios of environment as well as energy demand and power generation technologies in the tropics. Many of the countries within the tropics are highly populated and this results in various problems related to the environment and energy. The demand for energy in these countries keeps increasing but concurrently there are also environmental issues that require serious attention. As the global concern on the environment is alarming today, the choice of power generation should be of the cleanest possible resource. This various reports on research activities carried out in the tropics on the aspect of environment and energy presented in this book are highly beneficial for those who like to see an improvement in the tropics.

Urban Heat Island Modeling for Tropical Climates Ansar Khan, Soumendu Chatterjee, Yupeng Wang, 2020-11-17. Urban Heat Island Modeling for Tropical Climates takes into account the different urban physics in tropical environments, presenting a way of UHI scaling for tropical cities. Topics include measuring, modeling, and proper mitigation strategies which account for the surface energy balance of tropics. Tropical cities are more susceptible to the effects of projected global warming because of conditions in tropical climates and the rapid growth of so many cities in this zone. The need for research on measuring, modeling, and mitigation of UHI effects in tropical cities is of growing importance. This book walks through the basics of Urban Heat Islands, including causes, measurement, and analysis, then expands upon issues as well as the novel techniques that can be used to address issues specific to the region. Reviews topics related to understanding the fundamentals of modeling and impacts of urban heat islands. Covers many techniques from remote sensing to numerical modeling and then applying them to urban climate studies in general and in tropical cities. Describes the scaling of urban heat islands based on long-term seasonal thermal parameters as feature-based classification systems using a probabilistic and fuzzy logic approach, unlike local climate zones (LCZs).

Renewable Energy Resources And Rural Applications In The Developing World Norman L. Brown, 2019-06-18. The energy situation in developing countries is desperate. Because these countries are primarily dependent on fossil fuels, chiefly oil, for industrial growth, they have been hard hit by oil price increases. Further, in the rural areas where most of the population lives, there are limited supplies of increasingly expensive diesel fuel or kerosene. Noncommercial energy sources such as firewood, dung, and agricultural residues are generally used in rural areas, but under the pressure of growing populations, the forests are disappearing. This is resulting in a critical shortage of firewood for cooking and heating, as well as in the destruction of the environment. In addition, when dung and agricultural residues are burned, valuable fertilizers are destroyed. Thus, the rural areas, the sources of food and fiber, face a particularly alarming situation.

Next Generation of District Cooling Systems for Tropics Weidong Chen, Zhifeng Huang, Md Raisul Islam & Ernest Chua Kian Jon, **Tropical Sustainable Architecture** Joo Hwa Bay, Boon Lay Ong, 2007-03-14. The tropical belt, where large areas of South East Asia, India, Africa, and parts of both North and South America are located, forms the biggest landmass in the world and has one of the highest numbers of rapidly developing cities. Coincidentally, architecture in these regions shares common problems, the most easily identifiable being the tropical conditions of climate and natural environment. The context for architecture here is fraught with conflicts between tradition and modernization, massive influx of rural poor into urban areas, poorly managed rapid urban development, as well as the cultural and social strain of globalization. Many local and overseas architects, planners, and city fathers are interested in the social and environmental dimensions of these areas that contribute towards short-term solutions and long-term sustainable developments.
