degradation or alteration of materials through the combined action of corrosion and wear It limits the performance and life time of installations machines and devices with moving parts and controls certain manufacturing processes such as chemical mechanical polishing The effects of tribocorrosion are most pronounced on passive metals which owe their corrosion resistance to a thin protecting oxide film Most corrosion resistant engineering alloys belong to this category This book provides an introduction to the developing field of tribocorrosion and an overview of the latest research Part one reviews basic notions of corrosion and tribology before presenting the most recent results on the growth and structure of passive oxide films Tribocorrosion mechanisms under fretting sliding and erosion conditions respectively are then discussed Part two focuses on methods for measuring and preventing tribocorrosion It includes chapters on electrochemical techniques the design of tribocorrosion test equipment data evaluation and the optimisation of materials properties for tribocorrosion systems Part three presents a selection of tribocorrosion problems in engineering and medicine Three chapters address the tribocorrosion of medical implants including test methods and clinical implications Other chapters examine tribocorrosion issues in nuclear power plants marine environments automotive cooling circuits elevated temperature metal working and chemical mechanical polishing With its distinguished editors and international team of expert contributors Tribocorrosion of passive metals and coatings is an invaluable reference tool for engineers and researchers in industry and academia

confronted with tribocorrosion problems

Comprehensively reviews current research on the tribocorrosion of passive metals and coatings with particular reference to the design of tribocorrosion test equipment data evaluation and the optimisation of materials properties for tribocorrosion systems Chapters discuss tribocorrosion mechanisms under fretting sliding and erosion conditions before focussing on methods for measuring and preventing tribocorrosion Includes a comprehensive selection of tribocorrosion problems in engineering and medicine such as the tribocorrosion of medical implants and tribocorrosion issues in nuclear power plants marine environments automotive cooling circuits and elevated temperature metal working

Failure Mechanisms in Alloys George A. Pantazopoulos,2020-03-19 The era of lean production and excellence in manufacturing advancing with sustainable development demands the rational utilization of raw materials and energy resources adopting cleaner and environmentally friendly industrial processes In view of the new industrial revolution through digital transformation the exploitation of smart and sophisticated materials systems the need of minimizing scrap and increasing efficiency reliability and lifetime and on the other hand the pursuit of fuel economy and limitation of carbon footprint are necessary conditions for the imminent growth in a highly competitive economy Failure analysis is an interdisciplinary scientific topic reflecting the opinions and interpretations coming from a systematic evidence gathering procedure embracing various important sectors imparting knowledge and substantiating improvement practices The deep understanding of material component role e g rotating shaft extrusion die gas pipeline and properties will be of central importance for fitness for purpose in certain industrial processes and applications Finally it is hoped and strongly believed that the accumulation of additional knowledge in the field of failure mechanisms and the adoption of the principles philosophy and deep understanding of failure analysis process approach will strongly promote the learning concept as a continuously evolving process leading to personal and social progress and prosperity
