Conversion by Advanced  
Thermal Processes

Waste-to-Energy (WtE) plants are designed to convert solid waste into energy, typically through incineration. These plants can generate electricity and produce heat for industrial processes. WtE plants are often used as a means of reducing the volume of waste sent to landfills and as a source of renewable energy.

WtE plants can also be used to produce biofuels, such as biodiesel and bioethanol, from organic waste. These biofuels can be used as a renewable source of energy for transportation. WtE plants are also used to produce biochar, a carbon-rich material that can be used as a soil amendment or as a feedstock for the production of biofuels.
