Somatic Cell Genetics:

Techniques in Somatic Cell Genetics Jerry W. Shay, 2013-11-21 Somatic cell genetics is an exciting and rapidly expanding field of research. Since descriptions of the major experimental techniques in the field are scattered throughout various journals and other publications, there is a real need for a single reference source for both established investigators and students in the field. In addition, technical reports are frequently abridged such that many researchers are discouraged from attempting to adopt the appropriate methodology. This book therefore describes in detail the many recent technical advances in such areas of somatic cell genetics as transfer mediated by liposomes, erythrocyte ghosts, chromosomes, micro cells, mitochondria, and isolated nuclear DNA. These techniques have increased our understanding of the organization and regulation of eukaryotic cells. The production of antibiotic resistant cell lines and their use in studying cytoplasmic inheritance are also included. Evidence for the cytoplasmic regulation of nuclear gene expression in eukaryotic cells is rapidly accumulating following the characterization of cytoplasmic mutations. The production of nuclear coded mutations, their use in standard cell hybridization, and recent advances in techniques for fusing whole cells or cell components are also described. **The Cells**

of the Body Henry Harris, 1995 This book is the first scholarly history of research into the genetics of body cells from its origins in the 19th century to the present day. Henry Harris, a well known writer and a distinguished investigator in cell biology and cancer genetics, brings an unusually informed perspective to the technical aspects of his subject. He has written a book to be enjoyed not just by professional historians of science but by working scientists in genetics, cell biology, and cancer research from the graduate student level upwards. Its readers will derive a richer understanding of how and why the cells of the body are studied in the way that they are today. *Somatic Cell Genetics*, 1965 **Somatic Cell Genetics** Richard L. Ahuja, 2012-12-06 Most forest tree species were considered recalcitrant a decade ago but now with the improved in vitro techniques, some progress has been made towards culture of tree species. Micro propagation has been achieved from the juvenile tissues of a number of forest tree species. On the other hand, tissues from most mature trees are still very difficult to grow and differentiate in vitro. Nevertheless, there has been slow but steady progress in the application of tissue culture technology for culture of tissues, organs, cells, and protoplasts of tree species. As compared to most agricultural crops and herbaceous plant species, trees are a different lot. They have long generation cycles. They are highly heterozygous and have a large reservoir of genetic variability. Because of this genetic variability, their response in vitro is also variable. On a single medium, the response of tissues from different trees, genotypes of a single species, may be quite different, some responding by induction of growth and differentiation while others showing minimal or no growth at all. That makes the somatic cell genetics of woody plants somewhat difficult but at the same time interesting. Cell Culture and Somatic Cell Genetics of Plants I. K. Vasil, F. K. Vasil, 1984 **Somatic Cell Genetics and Molecular Genetics of Trees** M.R. Ahuja, Wout Boerjan, David B. Neale, 2012-12-06 This proceedings is based on a joint meeting of the two IUFRO International Union of Forestry Research Organizations Working Parties Somatic Cell Genetics S2 04 07 and Molecular Genetics S2 04 06 held in Gent Belgium 26 30 September 1995 Although a joint meeting of the two Working Parties had been discussed in the past this was the first such meeting that became a successful reality In fact this meeting provided an excellent forum for discussions and interactions in forest biotechnology that encouraged the participants to vote for a next joint meeting In the past decade rapid progress has been made in the somatic cell genetics and molecular genetics of forest trees In order to cover recent developments in the broad area of biotechnology the scientific program of the meeting was divided into several sessions These included somatic embryogenesis regeneration transformation gene expression molecular markers genome mapping and biotic and abiotic stresses The regeneration of plants produced by organogenesis or somatic embryogenesis is necessary not only for mass cloning of forest trees but also for its application in genetic transformation and molecular biology Although micropropagation has been achieved from juvenile tissues in a number of forest tree species in vitro regeneration from mature trees remains a challenging problem in most hardwoods and conifers The mechanisms involved in the transition from juvenile to mature phase in woody plants are poorly understood This transition can now be investigated at the molecular level New Techniques in Somatic Cell Genetics Alan Garth Tunnacliffe, 1984 Plant Improvement and Somatic Cell Genetics Indra Asil, 2012-12-02 Plant Improvement and Somatic Cell Genetics includes all but one of the papers presented at two symposia held during the XIII International Botanical Congress in Sydney Australia on August 21 28 1981 Frontiers in Plant Breeding and Cell Culture and Somatic Cell Genetics in Plant Biology highlight the ways in which plant breeding techniques can improve crops The book explores the potentials as well as the limitations of plant breeding and cellular and molecular techniques in plant improvement Comprised of 14 chapters this volume begins with an overview of the potential applications of exotic germplasm for tomato and cereal crop improvement It continues with a discussion of multiline breeding breeding of crop plants that can tolerate soil stresses combining genomes by means of conventional methods use of embryo culture in interspecific hybridization use of haploids in plant improvement and somaclonal variation and somatic hybridization as new techniques for plant improvement The reader is also introduced to plant cell culture as well as somatic cell genetics of cereals and grasses somatic cell fusion for inducing cytoplasmic exchange uses of cell culture mutants genetic transformation of plant cells by experimental procedures in the context of plant genetic engineering and use of molecular biology techniques for recognition and modification of crop plant genotypes

This book will be a useful resource for scientists and plant breeders interested in applying somatic cell genetics for crop improvement

Senescence Warren Nichols, 2012-12-06 This monograph *Senescence Dominant or Recessive In Somatic Cell Crosses* represents the second annual workshop to promote theory and concept development in aging research These workshops are part of a resource to bank cultured cells of special interest to aging research that was established at the Institute for Medical Research in Camden New Jersey by the National Institute on Aging in 1974 The underlying theme of the workshops is the use of cultured cells in a variety of somatic cell genetic systems designed to define mechanisms of in vitro cellular senescence and the possible insights that this may provide to the problems of in vivo aging The concept also includes bringing together workers from a variety of disciplines to stimulate new and innovative thoughts and work in the area The current workshop focuses on the relative role of nucleus and cytoplasm on determining the in vitro lifespan of human diploid cells as well as the relative influence of old and young cells when combined within a single cell structure The techniques and procedures discussed should make significant contributions to understanding in vitro senescence and may lead to the mapping of an area or areas of the genome linked to senescence as is being accomplished with viral transformation of normal cells Warren W Nichols Donald G Murphy i Contents Theoretic Mechanisms of in vitro Senescence 1 F MaPott Sinex Senescence in Cell Culture An Accumulation of Errors or Terminal Differentiation 13 Vincent J GPistofaZo
