Somatosensory Changes After Penetrating Brain Wounds in Man [by] Josephine Semmes [and Others]. Josephine Semmes, 1960 **Somatosensory Changes After Penetrating Brain Wounds in Man. [By] J. Semmes, Sidney Weinstein, Lila Ghent, Hans-Lukas Teuber** Josephine Semmes, Lila GHENT, Hans Lukas TEUBER, Sidney WEINSTEIN, 1960 **Neurobehavioral Consequences of Closed Head Injury** Harvey S. Levin, Arthur Lester

Benton, Robert G. Grossman, 1982 The first extensive critical review of the neurobehavioral sequelae of closed head injury the book's strengths include breadth of coverage stringent attention to methodological issues and objectivity of critical analyses clearly written concise well organized Journal of Clinical Neuropsychology Well conceived and well executed Belongs on the shelf of every practicing neurosurgeon neurologist psychologist and psychiatrist The New England Journal of Medicine

Physical Trauma as an Etiological Agent in Mental Retardation, 1970 *Outcome Measures in Orthopaedics and Orthopaedic Trauma, 2Ed* Paul Pynsent, Jeremy Fairbank, Andrew Carr, 2004-03-26 Orthopaedics and orthopaedic trauma are highly complex subjects that can prove difficult to quantify but accurate measurement is required for setting standards of care and for assessing the severity of an injury This book will help the reader assess outcome instruments and provides many references to sources of instruments and techniques to use **Development in the Fetus and Infant** James F.

Bosma, 1973 **Higher Cortical Functions in Man** Alexandr Romanovich Luria, 2012-12-06 This full length translation of Professor Luria's book introduces to the English speaking world a major document in neuropsychology summarizing Professor Luria's earlier contributions to that area for nearly a third of a century It is a monumental contribution Nothing of this scope exists in the Western literature of this field with the possible exception of Ajuriaguerra and Hecaen's book in French on the cerebral cortex Professor Luria's book thus marks a further and decisive step toward the eventual coalescence of neurology and psychology a goal to which only a few laboratories in the East and West have been devoted over the last decades The book is unique in its organization The first half deals with observations and interpretations concerning the major syndromes of man's left cerebral hemisphere those grievous distortions of higher functions traditionally described as aphasia agnosia and apraxia There is also a detailed and brilliant analysis of the syndrome of massive frontal lobe involvement The entire second half of the book is given over to a painstaking description of Professor Luria's tests many of them introduced by himself and set out in such detail that anyone could repeat them and thus verify Professor Luria's interpretations **The Human Nervous System** George Paxinos, 2012-12-02 The Human Nervous System is a definitive account of human neuroanatomy with a comprehensive coverage of the brain spinal cord and peripheral nervous system The cytoarchitecture

chemoarchitecture connectivity and major functions of neuronal structures are examined by acknowledged authorities in the field such as Alheid Amaral Armstrong Beitz Burke de Olmos Difiglia Garey Gerrits Gibbins Holstege Kaas Martin McKinley Norgren Ohye Paxinos Pearson Pioro Price Saper Sasaki Schoenen Tadork Voogd Webster Zilles and their associates Large clearly designed 8 1 2 x 11 format 35 information packed chapters 500 photomicrographs and diagrams 6 200 bibliographic entries Table of contents for every chapter Exceptionally cross referenced Detailed subject index Substantial original research work Mini atlases of some brain regions *Essentials of Neuropsychological Assessment* Rik Carl D'Amato, Lawrence C. Hartlage, PhD, 2008-06-16 Print CourseSmart *The Experimental Psychology of Mental Retardation* Donald K. Routh, 2017-07-05 The renaissance in the field of mental retardation since World War II has been expressed both in research and in renewed practical concern for the plight of the retarded The 1958 monograph by Masland Sarason and Gladwin entitled Mental Subnormality Biological Psychological and Cultural Factors was one spur if not the only one to much of the behavioral research which emerged in the late 1950 s Similarly the Handbook of Mental Deficiency edited by Norman Ellis and published in 1963 gave theoretical direction to many studies in the years following its appearance The present book and the symposium on which it is based are an attempt to continue this tradition by presenting theory based programmatic research in mental retardation aimed at the scientific understanding of the psychological processes involved The final chapter attempts to draw some of the implications of this research for the practical assessment and remediation of retardation The experimental work reported in this book generally uses rather traditional laboratory tasks for example classical conditioning or discrimination learning But the interest is in underlying processes rather than in such apparent trivia as whether the child blinks his eyelid or which of two stimulus objects he selects Thus this book is oriented around the psychological processes of interest namely learning attention memory language thinking and emotion and concludes with a section on the relationship between these processes and the biological aspects of retardation *Brock's Injuries of the Brain and Spinal Cord and Their Coverings* Samuel Brock, Charles Abler, Emanuel H. Feiring, 2013-11-27 *Operative Techniques in Epilepsy* John P. Girvin, 2014-12-05 This book describes the specific surgical techniques currently employed in patients with intractable epilepsy it also covers the relevant technical aspects of general neurosurgery All of the approaches associated with the various foci of epilepsy within the cerebral hemispheres are considered including temporal and frontal lobectomies and corticectomies parietal and occipital lobe resections corpus callosotomy hemispherectomy and multiple subpial incisions In addition an individual chapter is devoted to electrocortical stimulation and functional localization of the so called eloquent cortex The more general topics on which guidance is provided include bipolar coagulation with coverage of the physical principles strength of the coagulating current use of coagulation forceps the advantages of correct irrigation and use of cottonoid patties and all of the measures required during the performance of operations under local anesthesia The book is designed to meet the need for a practically oriented source of precise information on the operative procedures

employed in epilepsy patients and will be of special value for neurosurgical residents and fellows

Cerebral Cortex

Edward G. Jones, Alan Peters, 2012-12-06 The cerebral cortex especially that part customarily designated neocortex is one of the hallmarks of mammalian evolution and reaches its greatest size relatively speaking and its widest structural diversity in the human brain The evolution of this structure as remarkable for the huge numbers of neurons that it contains as for the range of behaviors that it controls has been of abiding interest to many generations of neuroscientists Yet few theories of cortical evolution have been proposed and none has stood the test of time In particular no theory has been successful in bridging the evolutionary gap that appears to exist between the pallium of non mammalian vertebrates and the neocortex of mammals Undoubtedly this stems in large part from the rapid divergence of non mammalian and mammalian forms and the lack of contemporary species whose telencephalic wall can be seen as having transitional characteristics The monotreme cortex for example is unquestionably mammalian in organization and that of no living reptile comes close to resembling it Yet anatomists such as Ramon y Cajal on examining the finer details of cortical structure were struck by the similarities in neuronal form particularly of the pyramidal cells and their predisposition to laminar alignment shared by representatives of all vertebrate classes

Cerebral Asymmetries in Sensory and Perceptual Processing S. Christman, 1997-12-11 The purpose of the book is to provide a comprehensive overview of hemispheric differences in sensory and perceptual processing The first section of the book deals directly with the intra and inter hemispheric processing of spatial and temporal frequencies in the visual modality The second section addresses the initial interaction between sensory and cognitive mechanisms dealing with how the left and right cerebral hemispheres differ in their computation and representation of sensory information The third section covers how attentional mechanisms modulate the nature of perceptual processing in the cerebral hemispheres Section four consists of a single chapter which reviews evidence suggesting a functional linkage between upper and right visual field processing on the one hand and lower and left visual field processing on the other

Journal of Rehabilitation Research & Development, 1987 **The Neuropsychology of Everyday Life: Issues in Development and Rehabilitation** David E. Tupper, Keith D. Cicerone, 1990-12-31 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of our trying to help our physician colleagues differentiate patients with neurologic disorders from those with psychiatric disorders In time experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered little valid information on which to base such complex differential diagnostic decisions It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student In the late 1940s such pioneers as Ward Halstead Alexander Luria George Yacorzynski Hans Lukas Teuber and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice However the only psychological tests that the clinical psychologist of my immediate post Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue Rorschach Draw A Person Bender Gestalt and Graham Kendall Memory for Designs Test
