Some Nonlinear Problems In Riemannian Geometry:

Some Nonlinear Problems in Riemannian Geometry Thierry Aubin, 2013-03-09 During the last few years the field of nonlinear problems has undergone great development This book consisting of the updated Grundlehren volume 252 by the author and of a newly written part deals with some important geometric problems that are of interest to many mathematicians and scientists but have only recently been partially solved Each problem is explained up to date results are given and proofs are presented Thus the reader is given access for each specific problem to its present status of solution as well as to the most up to date methods for approaching it The main objective of the book is to explain some methods and new techniques and to apply them It deals with such important subjects as variational methods the continuity method parabolic equations on fiber **Some Nonlinear Problems in Riemannian Geometry** Thierry Aubin, 1998-12-01 **Harmonic**

Morphisms Between Riemannian Manifolds Paul Baird, John C. Wood, 2003 This is an account in book form of the theory of harmonic morphisms between Riemannian manifolds *Uniqueness Theorems for Variational Problems by the Method of Transformation Groups* Wolfgang Reichel, 2004-04-30 A classical problem in the calculus of variations is the investigation of critical points of functionals $\text{cal } L$ on normed spaces V The present work addresses the question Under what conditions on the functional $\text{cal } L$ and the underlying space V does $\text{cal } L$ have at most one critical point A sufficient condition for uniqueness is given the presence of a variational sub symmetry i e a one parameter group G of transformations of V which strictly reduces the values of $\text{cal } L$ The method of transformation groups is applied to second order elliptic boundary value problems on Riemannian manifolds Further applications include problems of geometric analysis and elasticity *Geometric and Topological Methods for Quantum Field Theory* Alexander Cardona, Iván Contreras, Andrés F. Reyes-Lega, 2013-05-09 Based on lectures given at the renowned Villa de Leyva summer school this book provides a unique presentation of modern geometric methods in quantum field theory Written by experts it enables readers to enter some of the most fascinating research topics in this subject Covering a series of topics on geometry topology algebra number theory methods and their applications to quantum field theory the book covers topics such as Dirac structures holomorphic bundles and stability Feynman integrals geometric aspects of quantum field theory and the standard model spectral and Riemannian geometry and index theory This is a valuable guide for graduate students and researchers in physics and mathematics wanting to enter this interesting research field at the borderline between mathematics and physics **Łojasiewicz-Simon Gradient**

Inequalities for Coupled Yang-Mills Energy Functionals Paul M Feehan, Manoussos Maridakis, 2021-02-10 The authors primary goal in this monograph is to prove Łojasiewicz-Simon gradient inequalities for coupled Yang Mills energy functions using Sobolev spaces that impose minimal regularity requirements on pairs of connections and sections **Selfdual Gauge Field Vortices** Gabriella Tarantello, 2008-04-16 This monograph discusses specific examples of selfdual gauge field structures including the Chern Simons model the abelian Higgs model and Yang Mills gauge field theory The author builds a

foundation for gauge theory and selfdual vortices by introducing the basic mathematical language of gauge theory and formulating examples of Chern Simons Higgs theories in both abelian and non abelian settings Thereafter the Electroweak theory and self gravitating Electroweak strings are examined The final chapters treat elliptic problems involving Chern Simons models concentration compactness principles and Maxwell Chern Simons vortices

Handbook of Differential Equations: Stationary Partial Differential Equations Michel Chipot,Pavol Quittner,2004-07-06 The book could be a good companion for any graduate student in partial differential equations or in applied mathematics Each chapter brings indeed new ideas and new techniques which can be used in these fields The different chapters can be read independently and are of great pedagogical value The advanced researcher will find along the book the most recent achievements in various fields Independent chapters Most recent advances in each fields High didactic quality Self contained Excellence of the contributors Wide range of topics

Handbook of Differential Equations: Ordinary Differential Equations A. Canada,P. Drabek,A. Fonda,2004-09-09 The book contains seven survey papers about ordinary differential equations The common feature of all papers consists in the fact that nonlinear equations are focused on This reflects the situation in modern mathematical modelling nonlinear mathematical models are more realistic and describe the real world problems more accurately The implications are that new methods and approaches have to be looked for developed and adopted in order to understand and solve nonlinear ordinary differential equations The purpose of this volume is to inform the mathematical community and also other scientists interested in and using the mathematical apparatus of ordinary differential equations about some of these methods and possible applications

Nonlinear Problems with Lack of Compactness Giovanni Molica Bisci,Patrizia Pucci,2021-02-08 This authoritative book presents recent research results on nonlinear problems with lack of compactness The topics covered include several nonlinear problems in the Euclidean setting as well as variational problems on manifolds The combination of deep techniques in nonlinear analysis with applications to a variety of problems make this work an essential source of information for researchers and graduate students working in analysis and PDE s

Functional Inequalities: New Perspectives and New Applications Nassif Ghoussoub,Amir Moradifam,2013-04-09 The book describes how functional inequalities are often manifestations of natural mathematical structures and physical phenomena and how a few general principles validate large classes of analytic geometric inequalities old and new This point of view leads to systematic approaches for proving the most basic inequalities but also for improving them and for devising new ones sometimes at will and often on demand These general principles also offer novel ways for estimating best constants and for deciding whether these are attained in appropriate function spaces As such improvements of Hardy and Hardy Rellich type inequalities involving radially symmetric weights are variational manifestations of Sturm s theory on the oscillatory behavior of certain ordinary differential equations On the other hand most geometric inequalities including those of Sobolev and Log Sobolev type are simply expressions of the convexity of certain free energy functionals along the

geodesics on the Wasserstein manifold of probability measures equipped with the optimal mass transport metric Caffarelli Kohn Nirenberg and Hardy Rellich Sobolev type inequalities are then obtained by interpolating the above two classes of inequalities via the classical ones of Hlder The subtle Moser Onofri Aubin inequalities on the two dimensional sphere are connected to Liouville type theorems for planar mean field equations Publisher s website

On Some Aspects of the Theory of Anosov Systems Grigori A. Margulis, 2013-03-09 In this book the seminal 1970 Moscow thesis of Grigoriy A Margulis is published for the first time Entitled On Some Aspects of the Theory of Anosov Systems it uses ergodic theoretic techniques to study the distribution of periodic orbits of Anosov flows The thesis introduces the Margulis measure and uses it to obtain a precise asymptotic formula for counting periodic orbits This has an immediate application to counting closed geodesics on negatively curved manifolds The thesis also contains asymptotic formulas for the number of lattice points on universal coverings of compact manifolds of negative curvature The thesis is complemented by a survey by Richard Sharp discussing more recent developments in the theory of periodic orbits for hyperbolic flows including the results obtained in the light of Dolgopyat s breakthroughs on bounding transfer operators and rates of mixing
