## **Something Of An Achievement:**

**Achievement** Gwen Bradford, 2015-01-08 From the magisterial to the mundane achievements play a role in the best kind of human life and many people think that they are of such importance that they are worth pursuing at the expense of serious sacrifices Yet for all that no philosophers have devoted more than a few short passages to discerning what makes achievements valuable or even what makes something an achievement to begin with Gwen Bradford presents the first systematic account of what achievements are and what it is about them that makes them worth doing It turns out that more things count as achievements than we might have thought and that what makes them valuable isn't something we usually think of as good It turns out that difficulty perhaps surprisingly plays a central part in characterizing achievements and their value achievements are worth the effort But just what does it mean for something to be difficult and why is it valuable A thorough analysis of the nature of difficulty is given and ultimately the best account of the value of achievements taps into perfectionist axiology But not just any perfectionist theory of value will do and in this book we see a new perfectionist theory developed that succeeds in capturing the value of achievement better than its predecessors The Eye and the Mind C. Landesman, 2013-06-29 This book is a discussion of some of the major philosophical problems centering around the topic of sense perception and the foundations of human knowledge It begins with a characterization of our common sense understanding of the role of the senses in the acquisition of belief and it argues that scientific accounts of the processes of perception undermine salient parts of this understanding The naive point of view of direct realism cannot be sustained in the light of a scientifically instructed understanding of perception This critique of direct realism points to the correctness of the representative theory of perception characteristic of such early modern philosophers as Descartes and Locke and it also endorses the subjective turn that they defended It argues that these positions do not require introducing sense data into the picture and thus it avoids the intractable problems that the sense datum philosophy introduces In addition several versions of cognitive accounts of sense perception are criticized with the result that it is unnecessary to characterize sensory processes in intentional terms The book then turns to a leading question introduced into modern philosophy by Descartes and Locke the question of the accuracy of the information delivered by the senses to our faculty of belief In particular how accurate are our representations of the secondary qualities The case of color is considered in detail **The Moral Psychology of Pride** J.
