Through the Valley James F. Humphries, 2008-10-13 The fierce close combat in the remote areas of South Vietnam's northern provinces in 1967-68 the battles of Hiep Duc March 11 Nhi Ha and Hill 406 has been a strangely underreported slice of the Vietnam War Through the Valley brings those battles into sharp focus chronicling the efforts of the proud units of the Americal Division and the 196th Light Infantry Brigade against a stubborn enemy in long forgotten villages and on torturous hills Colonel Humphries draws on both his own combat experience and the eyewitness reports of fifty former veterans to reconstruct what it was like to fight in Vietnam

Road of 10,000 Pains Otto J. Leirack, 2010-04-01 This is an epic oral history of Vietnam's bloodiest campaign fought for seven months in a series of battles, most of them within four miles of each other along Route 534. Starting in October 1967, orders came down to the 2nd North Vietnamese Army Division commanding them to join with the local Viet Cong and seize the city of Danang in the Tet Offensive. After fighting for seven months in the Que Son Valley, the division was so battered that it failed to carry out its mission with only one platoon making it inside the city limits. This is the true life accounts of what fighting was like in that narrow bloody valley from the veteran's own mouths and how that saved Danang from suffering the same fate as Hue City.

Uses of Energy, Minerals and Changing Techniques
Kaulir Kisor Chatterjee, 2006 The book is about much more than a mere list of uses of the energy minerals which are the most important concerns of one and all now a days. In this book all the eight energy minerals have been brought within one cover. The book traces the history of use of each mineral to its beginning in India as well as in the other parts of the world. It explains the reasons why a particular grade of a particular mineral is used for a particular purpose. Then it also gives an elaborate and up to date account of the developments in utilization of the wastes generated during the use of the minerals and also the current trends and status in research and development for actual and potential substitutes of a mineral in different uses. Some of the information incorporated in it are not ordinarily available or accessible to many but have been obtained by the author through personal contacts with the industries, laboratories, etc. The book presents a highly technical subject in an easily understandable logical fashion.
