Sulfite Science And Technology:

Sulfite Science and Technology Michael J. Kocurek, Otto V. Ingruber, A. Wong, 1985 **Pulp and Paper Manufacture: Sulfite science & technology** Michael J. Kocurek, Frederick Stevens, 1983 **Handbook of Food Science, Technology, and Engineering** Yiu H. Hui, 2006 **Pulp Production and Processing** Valentin I. Popa, 2020-07-06 This book presents the aspects of cellulose obtained in correlation with its integration into the new concept of biorefining The authors detail the individual steps of pulp manufacture as well as properties and fiber characterization techniques for paper cellulose derivatives and processing by products This book is of interest to scientists and advanced students working in the fields of renewable resources and biorefining **Journal of Pulp and Paper Science** ,1988 Biomass Fractionation Technologies for a Lignocellulosic Feedstock Based Biorefinery S.I. Mussatto, 2016-02-18 Biomass Fractionation Technologies for a Lignocellulosic Feedstock based Biorefinery reviews the extensive research and tremendous scientific and technological developments that have occurred in the area of biorefining including industrial processes and product development using green technologies often referred as white biotechnology As there is a huge need for new design concepts for modern biorefineries as an alternative and amendment to industrial crude oil and gas refineries this book presents the most important topics related to biomass fractionation including advances challenges and perspectives all with references to current literature for further study Presented in 26 chapters by international field specialists each chapter consists of review text that comprises the most recent advances challenges and perspectives for each fractionation technique The book is an indispensable reference for all professionals students and workers involved in biomass biorefinery assisting them in establishing efficient and economically viable process technologies for biomass fractionation Provides information on the most advanced and innovative pretreatment processes and technologies for biomass Reviews numerous valuable products from lignocellulose Discusses integration of processes for complete biomass conversion with minimum waste generation Identifies the research gaps in scale up Presents an indispensable reference for all professionals students and workers involved in biomass biorefinery assisting them in establishing efficient and economically viable process technologies for biomass fractionation Biomass Utilization: Conversion Strategies Nhuan Phu Nghiem, Tae Hyun Kim, Chang Geun Yoo, 2022-08-20 This book focuses on the technologies developed for the conversion of all three biomass components i e cellulose hemicellulose and lignin and their constituents to fuels and high value products Both biochemical and thermochemical approaches are reviewed Additionally the developed technologies are described in detail and their potential applications as well as their commercial status are discussed The early attempts to produce fuel ethanol from lignocellulosic biomass feedstock focused solely on the biological conversion of cellulose because the only organism that had been used successfully for commercial production of ethanol i e *Saccharomyces cerevisiae* could only ferment glucose which was obtained from the hydrolysis of cellulose Hemicellulose and lignin were considered as wastes in these processes and were

normally removed in pretreatment processes to enhance enzymatic hydrolysis of the remaining cellulose. However, this approach was not economically feasible, and as a result, the biorefinery concept was developed. In a biorefinery, in addition to ethanol, various higher value products are produced from hemicellulose and lignin, which were previously not considered. Consequently, technologies were developed for the fractionation of biomass and conversion of hemicellulose and lignin to fuels and high value products to improve the economic feasibility. Written and edited by a team of investigators with many years of experience in biomass processing research and development, this book is an informative resource for postgraduate students and researchers interested in biorefinery and biofuel technologies both in academia and commercial laboratories.

Chemistry for Biomass Utilization Raimo Alén, 2023-12-04. Much interest has been directed to the versatile possibilities of using lignocellulosic biomass resources, i.e. renewable raw materials, for the full scale production of various chemicals and other bioproducts together with solid, liquid and gaseous fuels. Introduces modern aspects and various technologies of lignocellulosic biomass conversion for producing chemicals, biofuels and other products in a reader friendly way. Starting with fundamentals of biorefinery, the author further describes chemical, biochemical and thermal conversion approaches. In addition, the properties and biorefining principles of non wood biomass feedstock. **Kirk-Othmer**

Encyclopedia of Chemical Technology, Volume 23 Kirk-Othmer, 2006-11-10. The fifth edition of the Kirk-Othmer Encyclopedia of Chemical Technology builds upon the solid foundation of the previous editions, which have proven to be a mainstay for chemists, biochemists and engineers at academic, industrial and government institutions since publication of the first edition in 1949. The new edition includes necessary adjustments and modernization of the content to reflect changes and developments in chemical technology. **Handbook of Pulp, 2 Volume Set** Herbert Sixta, 2006-03-17. In this two volume set

Dr Herbert Sixta, head of the cellulose and viscose research department at Lenzing AG in Austria, has brought together a team of authors to produce the first comprehensive handbook on the market. Alongside the traditional aspects of pulping processes, pulp used in industry and paper pulps, this book describes all pulping processes used for paper and board manufacturing as well as waste liquor treatment, pulp bleaching and environmental aspects, while also covering pulp properties and applications. From the content: Chemical Pulp, Mechanical Pulp, Recovered Paper and Recycled Fibers.

Analytical Characterization of Pulps. This handbook is essential reading for all chemists and engineers in the paper and pulp industry. **Antimicrobials in Food** P. Michael Davidson, T. Matthew Taylor, Jairus R. D. David, 2020-11-10. Fifteen years have passed since the 3rd edition of Antimicrobials in Food was published. It was arguably considered the must have reference for those needing information on chemical antimicrobials used in foods. In the years since the last edition, the food industry has undergone radical transformations because of changes on several fronts. Reported consumer demands for the use of natural and clean label antimicrobials have increased significantly. The discovery of new foodborne pathogen niches and potentially hazardous foods, along with a critical need to reduce food spoilage waste, has increased the need for suitable antimicrobial

compounds or systems Novel natural antimicrobials continue to be discovered and new research has been carried out on traditional compounds These and other related issues led the editors to develop the 4th edition of Antimicrobials in Food In the 4th edition the editors have compiled contemporary topics with information synthesized from internationally recognized authorities in their fields In addition to updated information new chapters have been added in this latest release with content on the use of bacteriophages lauric arginate ester and various systems for antimicrobial encapsulation and delivery Comprehensive revisions of landmark chapters in previous editions including naturally occurring antimicrobials from both animal and plant sources methods for determining antimicrobial activity new approaches to multifactorial food preservation or hurdle technology and mechanisms of action resistance and stress adaptation are included Complementing these topics is new information on quantifying the capability of clean antimicrobials for food preservation when compared to traditional food preservatives and industry considerations when antimicrobials are evaluated for use in food manufacture Features Covers all food antimicrobials natural and synthetic with the latest research on each type Contains 5 000 references on every conceivable food antimicrobial Guides in the selection of appropriate additives for specific food products Includes innovations in antimicrobial delivery technologies and the use of multifactorial food preservation with antimicrobials
