Workshop on Using Information Technology to Enhance Disaster Management National Research Council, Computer Science and Telecommunications Board, Committee on Using Information Technology to Enhance Disaster Management, 2005-10-03

Section 214 of the E government Act of 2002 called on the Administrator of the Office of Electronic Government in the Office of Management and Budget in consultation with the Federal Emergency Management Agency FEMA to ensure that a study is conducted on using information technology to enhance crisis preparedness response and consequence management of natural and manmade disasters The section cited as a goal to improve how information technology is used in coordinating and facilitating information on disaster preparedness response and recovery while ensuring the availability of such information across multiple access channels In early 2005 FEMA via a subcontract through Battelle Memorial Institute asked the Computer Science and Telecommunications Board CSTB of the National Research Council NRC to undertake a two phase study on these issues Summary of a Workshop on Using Information Technology to Enhance Disaster Management culminates phase 1 of the project CSTB established the Committee on Using Information Technology to Enhance Disaster Management and a public workshop was held under the committee s auspices on June 22 23 2005 The committee s goal for the workshop was to establish a base of information for its study by hearing about present and future uses of IT from the perspective of federal state and local disaster management officials and users together with a sampling of relevant IT research and development activities A variety of representatives of federal state and local government agencies private industry and the research community participated Panelists at the workshop presented a range of views on the present state of the art and practice and future opportunities to harness information technology to aid in the management of natural and human made disasters This report summarizes some of the key points made by workshop participants This report also contains the workshop agenda and includes biographical information for committee members and staff In phase 2 of its study the committee will supplement the inputs received at the workshop with information gathered at several site visits and a series of additional briefings Phase 2 will culminate in a final report expected in spring 2006 which provides findings and recommendations on requirements for effective use of information technology for disaster management research and development needs and opportunities and related research management and technology transition considerations

Information Technology Research, Innovation, and E-Government National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Computing and Communications Research to Enable Better Use of Information Technology in Government, 2002-06-03 Governments have done much to leverage information technology to deploy e government services but much work remains before the vision of e government can be fully realized Information Technology Research Innovation and E government examines the emerging visions for e government the technologies required to implement them and approaches that can be taken to accelerate innovation and the transition of innovative information technologies from the laboratory to operational government systems In many cases

government can follow the private sector in designing and implementing IT based services But there are a number of areas where government requirements differ from those in the commercial world and in these areas government will need to act on its role as a demand leader Although researchers and government agencies may appear to be unlikely allies in this endeavor both groups have a shared interest in innovation and meeting future needs E government innovation will require addressing a broad array of issues including organization and policy as well as engineering practice and technology research and development and each of these issues is considered in the book Handbook of Risk and Crisis Communication Robert L. Heath, H. Dan O'Hair, 2020-10-28 The Handbook of Risk and Crisis Communication explores the scope and purpose of risk and its counterpart crisis to facilitate the understanding of these issues from conceptual and strategic perspectives Recognizing that risk is a central feature of our daily lives found in relationships organizations governments the environment and a wide variety of interactions contributors to this volume explore such questions as What is likely to happen to whom and with what consequences To what extent can science and vigilance prevent or mitigate negative outcomes and What obligation do some segments of local national and global populations have to help other segments manage risks shedding light on the issues in the quest for definitive answers The Handbook offers a broad approach to the study of risk and crisis as joint concerns Chapters explore the reach of crisis and risk communication define and examine key constructs and parse the contexts of these vital areas As a whole the volume presents a comprehensive array of studies that highlight the standard principles and theories on both topics serving as the largest effort to date focused on engaging risk communication discussions in a comprehensive manner Now available in paperback the Handbook of Risk and Crisis Communication can be readily used in graduate coursework and individual research programs With perspectives from psychology sociology anthropology political science economics and communication the Handbook provides vital insights for all disciplines studying risk and is required reading for scholars and researchers investigating risk and crisis in various contexts *Improving Disaster Management* National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Using Information Technology to Enhance Disaster Management, 2007-05-01 Information technology IT has the potential to play a critical role in managing natural and human made disasters Damage to communications infrastructure along with other communications problems exacerbated the difficulties in carrying out response and recovery efforts following Hurricane Katrina To assist government planning in this area the Congress in the E government Act of 2002 directed the Federal Emergency Management Agency FEMA to request the NRC to conduct a study on the application of IT to disaster management This report characterizes disaster management providing a framework for considering the range and nature of information and communication needs presents a vision of the potential for IT to improve disaster management provides an analysis of structural organizational and other non technical barriers to the acquisition adoption and effective use of IT in disaster and offers an outline of a research program aimed at strengthening IT enabled capabilities for disaster

The papers were organized in topical sections as follows: Information for Disaster Management; Training; Evacuation; Reliability in Decision making; War and Safety Issues; Information and Community Disaster Management.

Information Systems for Crisis Response and Management in Mediterranean Countries Chihab Hanachi, Frédérick Bénaben, François Charoy, 2014-09-10 This book contains the refereed proceedings of the First International Conference on Information Systems for Crisis Response and Management in Mediterranean Countries ISCRAM med 2014 held in Toulouse France in October 2014. The aim of ISCRAM med was to gather researchers and practitioners working in the area of Information Systems for Crisis Response and Management with a special but not limited focus on Mediterranean crises. These include political crises, economic crises, natural hazards and fatal industrial incidents. The 15 full papers included in this book were carefully reviewed and selected from 44 submissions. The contributions are organized in topical sections on supply chain and distribution modeling and training; human interactions in the crisis field; coordination and agility; and social aspects in crisis management.

Technology and Emergency Management John C. Pine, 2017-08-18 The first book devoted to a critically important aspect of disaster planning: management and mitigation. Technology and Emergency Management Second Edition describes best practices for technology use in emergency planning, response, recovery, and mitigation. It also describes the key elements that must be in place for technology to enhance the emergency management process. The tools, resources, and strategies discussed have been applied by organizations worldwide tasked with planning for and managing every variety of natural and man-made hazard and disaster. Illustrative case studies based on their experiences appear throughout the book. This new addition of the critically acclaimed guide has been fully updated and expanded to reflect significant developments occurring in the field over the past decade. It features in-depth coverage of major advances in GIS technologies, including the development of mapping tools and high-resolution remote sensing imaging. Also covered is the increase in computer processing power and mobility and enhanced analytical capabilities for assessing the present conditions of natural systems and extrapolating from them to create accurate models of potential crisis conditions. This second edition also features a new section on cybersecurity and a new chapter on social media and disaster preparedness. Response and recovery has been added. Explores the role of technology in emergency planning, response, recovery, and mitigation efforts. Explores applications of the Internet, telecommunications, and networks to emergency management, as well as geospatial technologies and their applications. Reviews the elements of hazard models and the relative strengths and weaknesses of modeling programs. Describes techniques for developing hazard prediction models.

using direct and remote sensing data Includes test questions for each chapter and a solutions manual and PowerPoint slides are available on a companion website Technology and Emergency Management Second Edition is a valuable working resource for practicing emergency managers and an excellent supplementary text for undergraduate and graduate students in emergency management and disaster management programs urban and regional planning and related fields
