In this major reconceptualization of the history of U.S. foreign policy, Walter Hixson engages with the entire sweep of that history from its Puritan beginnings to the twenty-first century's war on terror. He contends that a mythical national identity, which includes the notion of American moral superiority and the duty to protect all of humanity, has had remarkable continuity through the centuries, repeatedly propelling America into war against an endless series of external enemies. As this myth has supported violence, violence in turn has supported the myth. *The Myth of American Diplomacy* shows the deep connections between American foreign policy and the domestic culture from which it springs. Hixson investigates the national narratives that help to explain ethnic cleansing of Indians, nineteenth-century imperial thrusts in Mexico and the Philippines, the two World Wars, the Cold War, the Iraq War, and today's war on terror. He examines the discourses within America that have continuously inspired what he calls our pathologically violent foreign policy. The presumption that, as an exceptionally virtuous nation, the United States possesses a special right to exert power only encourages violence. Hixson concludes and he suggests some fruitful ways to redirect foreign policy toward a more just and peaceful world.

Ionospheric Space Weather Timothy Fuller-Rowell, Enda Woke Yizengaw, Patricia H. Doherty, Sunanda Basu, 2016-11-23. This monograph is the outcome of an American Geophysical Union Chapman Conference on longitude and hemispheric dependence of ionospheric space weather, including the impact of waves propagating from the lower atmosphere. The Chapman Conference was held in Africa as a means of focusing attention on an extensive geographic region where observations are critically needed to address some of the fundamental questions of the physical processes driving the ionosphere locally and globally. The compilation of papers from the conference describes the physics of this system and the mechanisms that control ionospheric space weather in a combination of tutorial-like and focused articles that will be of value to the upper atmosphere scientific community in general and to ongoing global magnetosphere-ionosphere-thermosphere

MIT modeling efforts in particular A number of articles from each science theme describe details of the physics behind each phenomenon that help to solve the complexity of the MIT system Because this volume is an outcome of the research presented at this first space science Chapman Conference held in Africa it has further provided an opportunity for African scientists to communicate their research results with the international community In addition the meeting and this conference volume will greatly enhance the space science education and research interest in the African continent and around the world Ionospheric Space Weather includes articles from six science themes that were discussed at the Chapman Conference in 2012 These include Hemispherical dependence of magnetospheric energy injection and the thermosphere ionosphere response Longitude and hemispheric dependence of storm enhanced densities SED Response of the thermosphere and ionosphere to variability in solar radiation Longitude spatial structure in total electron content and electrodynamics Temporal response to lower atmosphere disturbances Ionospheric irregularities and scintillation Ionospheric Space Weather Longitude Dependence and Lower Atmosphere Forcing will be useful to both active researchers and advanced graduate students in the field of physics geophysics and engineering especially those who are keen to acquire a global understanding of ionospheric phenomena including observational information from all longitude sectors across the globe
