Solar Physics and Terrestrial Effects Roger P. Briggs, 1993 The Sunspot, 1916 Sunspots: Theory and Observations J.H. Thomas, N.O. Weiss, 2012-12-06 This volume contains the invited papers presented at the NATO Advanced Research Workshop on the Theory of Sunspots held in Cambridge England 22-27 September 1991 The idea of holding this Workshop first arose during the Solar Optical Telescope work shop on Theoretical Problems in High Resolution Solar Physics in Munich in 1985 At that meeting separate discussion groups were formed to consider specific topics in solar physics The discussion group on sunspots recommended that there be a meeting devoted to theoretical problems associated with sunspots the motivation being the consensus that theory seemed to lag behind the observational evidence in our quest for a satisfactory understanding of the physics of sunspots This recommendation was warmly received and the two of us were designated to organize the Workshop Although the Workshop eventually took place later than originally envisioned the delay turned out to be fortunate and the timing of the Workshop was ideal for a number of reasons There have been remarkable improvements in high resolution observations of sunspots in the past few years and many important new observational results were presented for the first time at this Workshop by groups working at the Lockheed Palo Alto Research Laboratories the Swedish and German telescopes in the Canary Islands and the V S National Solar Observatory Vector magnetographs and Stokes polarimetry have at last given us reliable measurements of the vector magnetic fields in sunspots

Planets, Sunspots and Earthquakes Frank Glasby, 2002 Planets Sunspots and Earthquakes presents a working hypothesis of how planets trigger sunspots and earthquakes Two distinct and separate effects are considered one is an internal effect whereby the core of the sun and the earth become more active The other is an external effect whereby the combined effect from external bodies stresses the earth's crust at a point where it enters or leaves the gravitational field of the group of external bodies The causes of the initial internal processes that are necessary for the final

seismic trigger effect to operate are examined and the connection with sunspot cycles is explored The work is the result of observation and investigation during three eleven year sunspot cycles and offers material for further research by specialists and students
