network of social boundaries *The Critical Theory of Axel Honneth* Danielle Petherbridge, 2013-09-05 *The Critical Theory of Axel Honneth* provides a comprehensive study of the work of Axel Honneth tracing the theoretical trajectory from his earliest writings on philosophical anthropology to the development of a theory of recognition The book argues that Honneth's early work provides important insights for the reconstruction of the normative project of critical theory and the articulation of a conceptual framework for analyzing social relations of power and domination Danielle Petherbridge contends however that these aims are not fully realized in Honneth's more mature project and that central insights recede as his project develops Petherbridge seeks to demonstrate that the basis for an alternative theory of intersubjectivity that can account for both an adequate theory of power and normative forms of subject formation can be immanently reconstructed from within Honneth's own work By contextualizing Honneth's project in relation to its theoretical influences *The Critical Theory of Axel Honneth* provides a critical study and excellent entry point that will be essential reading for both students and scholars who work in the areas of European philosophy critical theory social and political philosophy or social and political theory

Sense of Agency: Examining Awareness of the Acting Self Nicole David, James W Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances Della Sala et al 1991 Franck et al 2001 Frith 2005 Sirigu et al 1999 But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities Wegner 2003 Furthermore it plays into ethical and law questions concerning responsibility and guilt For these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike Significant progress has been made in this regard For example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency Bayne 2011

Gallagher 2000 2012 Pacherie 2008 Synofzik et al 2008 and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency Chambon et al 2013 David et al 2007 Farrer et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i e the what and when of agency processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions

The Real Mound Builders of North America A. Martin Byers, 2018-02-02 The Real Mound Builders of North America takes the standard position that the cultural communities of the Late Woodland period hiatus when little or no transregional monumental mound building and ceremonialism existed were the linear cultural and social ancestors of the communities responsible for the monumental earthworks of the unique Mississippian ceremonial assemblage and further these Late Woodland communities were the direct linear cultural and social descendants of those communities responsible for the great Hopewellian earthwork mounds and embankments and its associated unique ceremonial assemblage Byers argues that these communities persisted largely unchanged in terms of their essential social structures and cultural traditions while varying only in terms of their ceremonial practices and their associated sodality organizations that manifested these deep structures This continuist historical trajectory view stands in contrast to the current dominant evolutionary view that emphasizes abrupt social and cultural discontinuities with the Hopewellian ceremonial assemblage and earthworks mounds and embankments
