Shoesmith, 2000-10-09 This long standing symposia series has become the premier international forum for scientific and engineering issues related to all levels and types of radioactive wastes and their management Topics include fuel cladding and spent nuclear fuel container fabrication and corrosion performance assessment repository performance radionuclide sorption and transport cement based materials and waste containment corrosion of ceramic wasteforms structure and characterization of ceramics radiation effects natural analogs wasteform characterization and processing and corrosion and characterization of glass wasteforms

Substrate Engineering--paving the Way to Epitaxy David Norton, 2000 Epitaxial growth has always been a marriage

of convenience between film and substrate More and more frequently however it is impractical to use the same material for both film and substrate because it is not available as large single crystals it is prohibitively expensive or its properties are ill suited for the intended application To meet these challenges many strategies have been pursued to achieve highly oriented or single crystal thin films via epitaxy Crystalline films have been mechanically bonded to other materials to form composite substrates Crystals have been cut and rewelded patterned and regrown buffer layered and repolished Each strategy has met with fundamental challenges including lattice mismatch chemical incompatibility differences in thermal expansion and structural dissimilarity This book first published in 2000 focuses on developments in novel substrate engineering which enable improved epitaxy Topics include biaxially textured substrates for high T_c coated conductors surfaces for oxide epitaxy wafer bonding and lift off lattice mismatch engineering substrate engineering and solid phase recrystallization and epitaxy

Perry, 2000-05-22 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Nucleation and Growth Processes in Materials Antonios Gonis, Patrice E. A. Turchi, Alan J. Ardell, 2000 One of the goals of materials science is to design alloys with pre specified desirable technological properties To achieve this goal it is necessary to have a thorough understanding of the fundamental mechanisms underlying materials behavior In particular one must understand the effects on alloy properties caused by intentional changes in concentration and how the combinations of temperature time and uncontrollable foreign impurities affect microstructure In addition to the equilibrium phase information contained in phase diagrams nonequilibrium dynamic processes and metastable phases are known to be crucial in determining materials properties This volume brings together researchers working on various aspects of nonequilibrium processes in materials to discuss current research issues and to provide guidelines for future work Particular attention was paid to understanding particle nucleation and growth both experimentally and theoretically solid state reactions nanosystems liquid solid transformations and solidification and amorphization On the theoretical side fundamental principles governing nucleation and growth and related phenomena such as coarsening and Ostwald ripening are discussed Progress is also reported on the phase field method and on Monte Carlo simulations **Chemical-mechanical Polishing**, 2000 Solid Freeform and Additive Fabrication, 2000 High-k Gate Dielectrics for CMOS Technology Gang He, Zhaoqi Sun, 2012-08-10 A state of the art overview of high k dielectric materials for advanced field effect transistors from both a fundamental and a technological viewpoint summarizing the latest research results and development solutions As such the book clearly discusses the advantages of these materials over conventional materials and also addresses the issues that accompany their integration into existing production technologies Aimed at academia and industry alike this monograph combines introductory parts for newcomers to the field as well as advanced sections with directly applicable solutions for
