Zucker,Michael R. Darby,1995 This paper applies a rational action economic sociology approach to the central organizational theory question of whether action is embedded in pre formed institutions that are relatively cheap in terms of time and energy or to what extent action becomes embedded in newly constructed institutions that are more costly but perhaps better adapted to task goals We develop a new model of the social construction of trust producing social structure based on the initial endowment of this structure the demand for it and the cost of social construction We test the

model with data on construction of social structure in collaborations in space science and geophysics developed in a large number of interviews conducted by the Center for History of Physics of the American Institute of Physics We do find that greater pre existing endowment reduces social construction of new institutions while greater demand for trust increases that construction We also find some evidence that social construction of trust producing social structure in fact results in production of higher value science

Combining economic social psychological and sociological approaches to trust this book provides a general theoretical framework to causally explain conditional and unconditional trust it also presents an experimental test of the corresponding integrative model and its predictions Broadly it aims at advancing a cognitive turn in trust research by highlighting the importance of 1 an actor s context dependent definition of the situation and 2 the flexible and dynamic degree of rationality involved In essence trust is as multi faceted as there are cognitive routes that take us to the choice of a trusting act Therefore variable rationality has to be incorporated as an orthogonal dimension to the typological space of trust The theory presents an analytically tractable model the empirical test combines trust games high and low incentive conditions framing manipulations and psychometric measurements and is complemented by decision time analyses The Single Currency and European Citizenship Giovanni Moro, 2013-02-28 Established in 2002 the Euro is now the currency of 17 countries used by over 335 million people daily Although the single currency is much discussed in terms of macroeconomics and global finances policymakers rarely address its impact on European citizenship in social cultural political and everyday life economics terms This hidden side of the single currency is the focus of the essays which use various approaches from economic history and political sociology to citizenship and legitimacy to reveal the connections between the Euro and
