## **Sky Atlas 20000:**

Deep Sky Observing Steve R. Coe, 2012-12-06 Steve Coe has been watching the deep sky from locations near his home in Arizona for almost 20 years. During that time he has accumulated a wealth of knowledge, observations, hints, and tips that will help every deep sky observer regardless of experience. This his first book gives detailed practical advice about how to find the best observing site, how to make the most of the time spent there, and what equipment and instruments to take along. There are comprehensive lists of deep sky objects of all kinds along with Steve's own observations describing how they look through telescopes with apertures ranging from 8 to 36 inches (0.2 to 0.9 m). Most of all, this book is all about how to enjoy astronomy. Steve's enthusiasm and sense of wonder shine through every page as he invites you along on a tour of some of the most beautiful and fascinating sites in the deep sky. *Illustrated Dictionary of Practical Astronomy* C. R. Kitchin, 2012-12-06 The purpose of this book is two-fold. Firstly, to provide a handy quick source of reference of the terms, techniques, instruments, formulas, processes, etc. for practising observers, whether it is their first look through someone else's small telescope or whether they have spent decades building their own instruments, observing with them, and are regularly producing results to rival those of the professionals. It is not principally aimed at professional observers but in order to be sufficiently comprehensive for its intended audience, many entries have been included which will be relevant at that level. In particular, though the more esoteric parts of spectroscopy have not been included. References to specific observatories are included if their instrumentation includes optical telescopes over 1 m in diameter or radio dishes over 20 m. Individual entries for telescopes of 4 m or over are included, and for the larger radio instruments plus other telescopes that may be of interest for historical or other reasons, for example the 1m Yerkes refractor. Spacecraft have generally not been included apart from the Hubble space telescope because their short working lives mean that most current spacecraft will no longer be operating by the time that this book is published. Also, the names of spacecraft are frequently changed after launch, making it difficult to identify which mission is which. References to commercial organisations and to some widely available commercial products have been included, but an intending purchaser should always obtain up-to-date information. **The Universe of Digital Sky Surveys** Nicola R. Napolitano, Giuseppe Longo, Marcella Marconi, Maurizio Paolillo, Enrichetta Iodice, 2016-05-16 These are the proceedings of a meeting in honour of Massimo Capaccioli at the occasion of his 70th birthday. The conference aimed at summarizing the results from the main current and past digital sky survey projects and at discussing how these can be used to inspire ongoing projects and better plan the future ones. Over the last decades, digital sky surveys performed with dedicated telescopes and finely tuned wide-field cameras have revolutionized astronomy. They have become the main tool to investigate the nearby and far-away universe, thus providing new insights in the understanding of the galaxy structure and assembly across time, the dark components of the universe, as well as the history of our own galaxy. They have also opened the time domain, leading to a new understanding of the transient phenomena in the universe. By providing public access to top-quality data, digital surveys

have also changed the everyday practice of astronomers who have become less dependent on direct access to large observing facilities The full scientific exploitation of these surveys has also triggered significant advances in both space and ground based technology and in the field of multi object spectroscopy The various sections of this book are devoted to different relevant aspects of astrophysics in the era of digital sky surveys and include both review and shorter more focused contributions

*A Field Guide to the Stars and Planets* Jay M. Pasachoff,1992 Provides information about stars and planets including star maps
