Zhou, 2018-05-03 Pipe failures in water distribution systems can have a serious impact and hence it's important to maintain the condition and integrity of the distribution system This book presents a whole life cost optimisation model for the rehabilitation of water distribution systems It combines a pipe breakage number prediction model with a pipe criticality assessment model which enables the creation of a well constructed and more tightly constrained optimisation model The pipe breakage number prediction model combines information on the physical characteristics of the pipes with historical information on breakage and failure rates A weighted multiple nonlinear regression analysis is applied to describe the condition of different pipe groups The criticality assessment model combines a pipe's condition with its hydraulic significance through a modified TOPSIS This model enables the optimisation to focus its efforts on those important pipes The whole life cost optimal rehabilitation model is a multiple objective and multiple stage model which provides a suite of rehabilitation

decisions that minimise the whole life cost while maximising its long term performance The optimisation model is solved using a modified NSGA II The utility of the developed models is that it allows decision makers to prioritize their rehabilitation strategy in a proactive and cost effective manner

Analog Circuits and Systems Optimization based on Evolutionary Computation Techniques Manuel Barros,Jorge Guilherme,Nuno Horta,2010-04-22 The microelectronics market with special emphasis to the production of complex mixed signal systems on chip SoC is driven by three main dynamics time market productivity and managing complexity Pushed by the progress in nanometer technology the design teams are facing a curve of complexity that grows exponentially thereby slowing down the productivity design rate Analog design automation tools are not developing at the same pace of technology once custom design characterized by decisions taken at each step of the analog design flow lies most of the time on designer knowledge and expertise Actually the use of sign management platforms like the Cadences Virtuoso platform with a set of integrated CAD tools and database facilities to deal with the design transformations from the system level to the physical implementation can significantly speed up the design process and enhance the productivity of analog mixed signal integrated circuit IC design teams These design management platforms are a valuable help in analog IC design but they are still far behind the development stage of design automation tools already available for digital design Therefore the development of new CAD tools and design methodologies for analog and mixed signal ICs is essential to increase the designer's productivity and reduce design productivity gap The work presented in this book describes a new design automation approach to the problem of sizing analog ICs

Advances in Artificial Life Mathieu Capcarrere,Alex A. Freitas,Peter J.

Bentley, Colin G. Johnson, Jon Timmis, 2005-09-19 The Artificial Life term appeared more than 20 years ago in a small corner of New Mexico USA. Since then the area has developed dramatically, many researchers joining enthusiastically and research groups sprouting everywhere. This frenetic activity led to the emergence of several strands that are now established fields in themselves. We are now reaching a stage that one may describe as maturer, with more rigour, more benchmarks, more results, more stringent acceptance criteria, more applications in brief, more sound science. This, which is the natural path of all new areas, comes at a price, however. A certain enthusiasm, a certain adventurousness from the early years is fading and may have been lost on the way. The field has become more reasonable. To counterbalance this and to encourage lively discussions, a conceptual track where papers were judged on criteria like importance and/or novelty of the concepts proposed rather than the experimental/theoretical results has been introduced this year. A conference on a theme as broad as Artificial Life is bound to be very diverse, but a few tendencies emerged. First, fields like Robotics and Autonomous Agents or Evolutionary Computation are still extremely active and keep on bringing a wealth of results to the Artificial Life community. Even there, however, new tendencies appear, like collective robotics and more specifically self-assembling robotics, which represent now a large subsection. Second, new areas appear. *Knowledge-Based Intelligent Information and Engineering Systems* Rajiv Khosla, Robert J. Howlett, 2005-08-30 The four-volume set LNAI 3681, LNAI 3682, LNAI 3683 and LNAI 3684 constitute the refereed proceedings of the 9th International Conference on Knowledge-Based Intelligent Information and Engineering Systems KES 2005 held in Melbourne, Australia, in September 2005. The 716 revised papers presented were carefully reviewed and selected from nearly 1400 submissions. The papers present a wealth of original research results from the field of intelligent information processing in the broadest sense. Topics covered in the fourth volume are: innovations in intelligent systems and their applications; data mining and soft computing applications; skill acquisition and ubiquitous human-computer interaction; soft computing and their applications; agent-based workflows; knowledge sharing and reuse; multi-media authentication and watermarking applications; knowledge and engineering techniques for spatio-temporal applications; intelligent data analysis and applications; creativity support environment and its social applications; collective intelligence; computational methods for intelligent neuro-fuzzy applications; evolutionary and self-organizing sensors, actuators and processing hardware; knowledge-based systems for e-business and e-learning; multi-agent systems and evolutionary computing; ubiquitous pattern recognition; neural networks for data mining and knowledge-based technology in crime matching, modelling and prediction.
