Biophysics of Skin and Its Treatments Bharat Bhushan, 2016-09-28 This book provides a comprehensive overview of the structural nanotribological and nanomechanical properties of skin with and without cream treatment as a function of operating environment The biophysics of skin as the outer layer covering human or animal body is discussed as a complex biological structure Skin cream is used to improve skin health and create a smooth soft and flexible surface with moist perception by altering the surface roughness friction adhesion elastic modulus and surface charge of the skin surface *pH of the Skin: Issues and Challenges* Christian Surber, Christoph Abels, Howard Maibach, 2018-08-21 The concept of expressing acidity as the negative logarithm of the hydrogen ion concentration was defined and termed pH in the beginning of the 20th century The general usefulness of the pH concept for life science was recognized and later gained importance to analytical research Reports on results of pH measurements from living skin established the term acid mantle the skin's own protective shield that maintains a naturally acid pH It is invisible to the eye but crucial to the overall wellbeing of skin Chronic alkalization can throw this acid mantle out of balance leading to inflammation dermatitis and atopic skin diseases It is therefore no surprise that skin pH shifts have been observed in various skin pathologies It is also obvious that the pH in topically applied preparations may play an important role Optimal pH and buffer capacity within topical preparations not only support stability of active ingredients and auxiliary materials but may also increase absorption of the non ionized species of an acidic or a basic active ingredient They may even open up opportunities to modify and correct skin pH and hence accelerate barrier recovery and maintain or enhance barrier integrity Further efforts are needed to standardize and improve pH measurements in biological media or pharmaceutical cosmetic vehicles to increase and ensure quality comparability and relevance of research data In this volume we present a unique collection of papers that address past present and future issues of the pH of healthy and diseased skin It is hoped that this collection will foster future efforts in clinical and experimental skin research **Skin Care in Radiation Oncology** Barbara Fowble, Sue S. Yom, Florence Yuen, Sarah Arron, 2016-09-15 This book serves as a practical guide for the prevention and treatment of radiation dermatitis Skin toxicity caused by radiation treatment is common among cancer patients and minimizing the frequency and severity of these reactions improves quality of life and prevents interruptions that can compromise local regional control Each chapter is devoted to a specific disease site such as the head and neck breast gastrointestinal genitourinary gynecologic and central nervous system Pediatric malignancies and wound care for locally advanced cancers are also discussed For each topic the range and frequency of the observed skin reactions factors influencing these reactions the typical course of each reaction

and its resolution and the interventions used are presented This book provides evidence where it exists for the specific interventions and an extensive illustration program depicts the various reactions and their response to treatment protocols Skin Care in Radiation Oncology A Practical Guide presents a framework for patient care in an era of advancing technology and systemic and targeted therapies and is a valuable resource for radiation oncologists dermatologists and residents

Functional Polymers in Food Science Giuseppe Cirillo,Umile Gianfranco Spizzirri,Francesca Iemma,2015-03-10

Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e g high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This first volume of this two volume book concerns the application of polymers in food packaging **Films and Other Materials for Projection** Library of Congress,1973 Forging, Stamping, Heat Treating ,1929
