Cohen, 2003-03-12 One of the most vivid memories from my medical school training was seeing my first surgical operation on a patient with Crohn's disease The senior surgeon at Mount Sinai Hospital in New York City the same institution at which Burrill Crohn Leon Ginzburg and Gordon Oppenheimer had first described the disease terminal ileitis had doubtedly done countless operations on patients with inflammatory bowel disease in the past Yet as we both gazed down into the patient's open abdomen at the creeping fat that seemed to be wrapping its sticky fingers around the young man's intestines he stated this is the mystery of Crohn's disease no two patients are ever the same What is it about the inflammatory bowel diseases Crohn's disease and ulcerative colitis that we find so intriguing Is it the young age of the patients many who are younger than even the medical students tending to them Or is it the elusive etiology the theory of a mystery organism that has yet to be identified Perhaps it is the familial pattern of disease where many patients have relatives with similar diseases yet in some instances only one of a pair of identical twins is affected Regardless of the cause these chronic diseases with a typically early age of onset result in a long term commitment of the patient their families friends health care providers researchers employers and even health care insurers and other health related industries *Case Studies in Emergency Medicine* Rebecca Jeanmonod, Michelle Tomassi, Dan Mayer, 2010-09-02 A case based book organized by the top 10 common complaints of patients presenting to emergency departments This approach allows the reader to learn the pathophysiology of the major diseases and analyze each case in a way that more closely approximates the clinical practice of medicine not knowing which organ system is damaged or compromised before examining the patient The cases are based on real patients and the diseases are either common in emergency practice or are dangerous diagnoses not to be missed The case descriptions include questions regarding the patient's presentation and basic information about the disease illustrating key elements from the history physical and when necessary ancillary studies that help lead to a diagnosis Each chapter ends with a flow diagram showing how diseases of different organ systems can present with similar initial complaints This book is an ideal resource for medical students residents and trainees in emergency medicine **Anesthésie : conduites cliniques** Philippe Duvaldestin, Lee A.
