The Five Biggest Ideas In Science:

The Five Biggest Ideas in Science Charles M. Wynn, 2003 Presents five basic scientific hypotheses the atomic model the periodic law the big bang theory plate tectonics and evolution

The Five Biggest Ideas in Science Charles M. Wynn, Arthur W. Wiggins, 2008-05-02 In a thought provoking and entertaining exploration of The Five Biggest Ideas in Science authors Charles Wynn and Arthur Wiggins provide a panoramic view of the questions scientists seek to answer about the natural world Do basic building blocks of matter exist and if so what do they look like BIG IDEA 1 Physics Model of the Atom What relationships if any exist among different kinds of atoms BIG IDEA 2 Chemistry's Periodic Law Where did the atoms of the universe come from and what is their destiny BIG IDEA 3 Astronomy's Big Bang Theory How is the matter of the universe arranged in planet Earth BIG IDEA 4 Geology's Plate Tectonics Model How did life on planet Earth originate and develop BIG IDEA 5 Biology's Theory of Evolution Get set for a lively and informative discussion as you also learn how to evaluate potential applications of these and other scientific ideas

Understanding by Design Grant P. Wiggins, Jay McTighe, 2005 What is understanding and how does it differ from knowledge How can we determine the big ideas worth understanding Why is understanding an important teaching goal and how do we know when students have attained it How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high stakes standards based environment Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of Understanding by Design Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998 the authors have greatly revised and expanded their original work to guide educators across the K 16 spectrum in the design of curriculum assessment and instruction With an improved UbD Template at its core the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks Readers will learn why the familiar coverage and activity based approaches to curriculum design fall short and how a focus on the six facets of understanding can enrich student learning With an expanded array of practical strategies tools and examples from all subject areas the book demonstrates how the research based principles of Understanding by Design apply to district frameworks as well as to individual units of curriculum Combining provocative ideas thoughtful analysis and tested approaches this new edition of Understanding by Design offers teacher designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike

Five Big Ideas for Effective Teaching Donna Wilson, Marcus Conyers, 2020 This is the second edition of the seminal text designed to empower educators with an innovative and inspiring conceptual framework for effective teaching This bestseller is grounded in the synergy of five big ideas for connecting mind brain and education research to classroom practice neuroplasticity potential malleable intelligence the Body Brain System and metacognition Updated and expanded to include new sections on social and emotional learning this edition offers a firm

foundation for implementing current rigorous standards The authors draw on their experience working with tens of thousands of educators worldwide to drive the book's focus on practical application Essential ideas are reinforced through vignettes examples inspirational stories from teachers strategies reflective questions and current research on how people learn New for the Second Edition An exploration of how guiding students to develop social emotional cognitive affective and behavioral competencies can improve their personal relationships peer and teacher interactions and academic outcomes An examination of recent advances in understanding how brain plasticity extends over the life span how working memory supports students to tackle more complex learning tasks and how teaching students about growth mindsets can power learning A synthesis of the science behind the power of positivity learning potential metacognition the social aspects of cognition and the Body Brain System for classroom and school applications An expanded reference list with relevant new publications

The Five Biggest Unsolved Problems in Science Arthur W. Wiggins, Charles M. Wynn, 2003-09-12 An in depth look at the most intriguing puzzles in science today In this illuminating book professors Arthur Wiggins and Charles Wynn explore what they believe are the five biggest science problems Physics Why do some particles have mass while others have none Chemistry By what series of chemical reactions did atoms form the first living things Biology What is the complete structure and function of the proteome Geology Is accurate long range weather forecasting possible Astronomy Why is the universe expanding faster and faster Wiggins and Wynn carefully explain each of these problems then discuss the theories that address them Some of the many topics covered include string theory the human genome chaos theory and protein folding Featuring humorous illustrations from renowned science cartoonist Sidney Harris this book invites you to explore the events that led to these problems and the cutting edge efforts being made to solve them The authors also provide Idea Folders which contain additional details about the unsolved problems and Resources for Digging Deeper such as books periodicals and Web sites

Charles Darwin and The Origin of Species Keith A. Francis, 2006-12-30 In 1859 an amateur British naturalist published a book of findings that shook the scientific community to its core and changed the structure of religion and science as we know them The product of over 20 years of research The Origin of Species challenged the popular belief that species could not evolve and argued that species can adapt to their environment and develop accordingly Although other scientists had observed some of the phenomena that Charles Darwin addressed he was the first to theorize that natural selection and later evolution were viable explanations for the origins of life The implications of Darwin's findings still reverberate today in the classroom in the courtroom and at the highest legislative levels Lively thematic chapters explore how Darwin came to the conclusions published in The Origin of Species and in later works such as The Descent of Man from his early years at Cambridge to his observations of species on the HMS Beagle voyages through the 20 years of research that culminated in Origin Also included is an insightful discussion of Darwin's impact as it is felt today from movies and popular culture to the current Intelligent Design controversy Biographies of influential figures primary source letters and selections
