Parliament. House of Commons. Select Committee on Science and Technology, Great Britain: Parliament: House of Commons: Science and Technology Committee, Andrew Miller, 2014-05-04 The Government launched its new horizon scanning programme last July stating that in a tight economic climate it is more important than ever to have the best possible understanding of the world around us and how that world is changing However as it stands the new programme is little more than an echo chamber for Government views The new bodies that have been created consist entirely of Civil Servants effectively excluding the vast pool of expertise that exists outside of government The new programme does not even have a dedicated web presence to keep interested parties informed The programme's failings are partially attributed to a lack of ministerial oversight The Government also needs to recognise the potential role to be played in the new programme by the Government Office for Science GO Science specifically the Foresight Unit The relative lack of impact that the Foresight Unit has historically had on policy is largely a result of its non central location in government GO Science is located in the Department of Business Innovation and Skills BIS In contrast the new horizon scanning programme is located in the Cabinet Office In choosing to situate the new horizon scanning programme in the Cabinet Office the Government has recognised the importance of location and has thereby acknowledged the strength of this argument GO Science should be relocated from BIS to the Cabinet Office where it can play a more central role in the new programme and more effectively fulfill its role of ensuring that the best scientific evidence is utilised across government *New Formulas for America's Workforce*, 2003

Schuh,2016-10-20 This book documents those first links that students make between content they learn in their classrooms and their prior experiences Through six late elementary school case studies these knowledge construction links are brought to life The links of the students are often rich in describing who these individuals are where they are in their learning process and what is meaningful to them Many times these links point to what has been learned both in and out of school and the contexts when and where that learning took place The mind as rhizome metaphor was used to guide the development and interpretation of the studies while the lens of Peircian semiotics provides an interpretation for these initial links The resulting grounded theory is presented through a rich and extensive presentation of excerpts from classroom observations student interviews and a student writing activity and describes the varying types of student links how the links were prompted the relationships between what the students

were learning and what they already knew and specific types of in school links The narrative includes how these links were supported or inhibited in the classroom drawing on the roles of the teachers in the classrooms and what constituted authority sources of information in those classrooms Before exploring the students linking as a process of ongoing semiosis and how this process is part of a dynamic system a study of the relationship between student knowledge links and achievement is shared This rich narrative will be of interest to scholars and practitioners alike and includes an extensive appendix documenting the research methods
