Situated Cognition:

The Cambridge Handbook of Situated Cognition Philip Robbins, Murat Aydede, 2008-11-03 Since its inception some fifty years ago cognitive science has seen a number of sea changes Perhaps the best known is the development of connectionist models of cognition as an alternative to classical symbol based approaches A more recent and increasingly influential trend is that of dynamical systems based ecologically oriented models of the mind Researchers suggest that a full understanding of the mind will require systematic study of the dynamics of interaction between mind body and world Some argue that this new orientation calls for a revolutionary new metaphysics of mind according to which mental states and processes and even persons literally extend into the environment This book is a guide to this movement in cognitive science Each chapter tackles either a specific area of empirical research or specific sector of the conceptual foundation underlying this research

Situated Cognition David Kirshner, James Anthony Whitson, 1997 This book is a result of a symposium at a recent annual meeting of the American Educational Research Association that explored foundational issues relative to situated cognition theory Its chapters contribute to discourse about repositioning situated cognition theory within the broader supporting disciplines and to resolving the problematics addressed within the book There is a cumulative vision to the book its theme is that the notion of the individual in situated cognition theory needs to be fundamentally reformulated No theoretical reconfiguration of the social world or of social practices can overcome an individual cast in the dualist tradition This reformulation probes the physiological psychoanalytic and semiotic constitution of persons Chapters authors cover a wide range of topics including transfer of training arguing that traditional cognitive psychology has found precious little evidence of people's ability to apply knowledge gained in one context to the problems encountered in another ecosocial systems a new object of inquiry for situated cognition theory in which the primary units of analysis are not things or people but processes and practices how linkages between discursive practices are manifested as semiotic chaining of signifiers for individuals engaged in everyday activities at home or at school how the ability to function in ways that are consistent with logic emerges not through reflective abstraction on actions but through an enhanced sense of agency as more responsible roles are adopted in daily life practices the mutual constitution of social and individual knowledge familiar terms and concepts normally available through linguistic labels are cultural models to be distinguished from the variegated and hidden mid level meanings that reflect their situated uses in social activity the material neurological substrate through which cultural models and mid level meanings emerge and how learning environments can be structured to take advantage of the perceptual underpinnings of cognition

Situated Cognition and Its Critics: Recent Developments Albert Newen, Beate Krickel, Achim Stephan, Leon De Bruin, 2021-11-16

Beyond the Brain Benoit Hardy-Vallée, 2009-03-26 Cognitive science faces a major methodological and conceptual change since the 90 s Whereas the brain was traditionally conceived as being the only seat of intelligence many researches emphasize the entrenchment of the brain in body context and culture In 2006 a

conference was held at the Universit du Qu bec Montr al UQAM and allowed researchers from various fields to interact and discuss such issues Cognitio 2006 was an occasion for philosophers cognitive scientists and biologists to present the latest developments in their discipline and this book aims at providing a general overview of current research on embodied situated and distributed cognition Philosophy of Psychology and Cognitive Science ,2006-10-23 Psychology is the study of thinking and cognitive science is the interdisciplinary investigation of mind and intelligence that also includes philosophy artificial intelligence neuroscience linguistics and anthropology In these investigations many philosophical issues arise concerning methods and central concepts The Handbook of Philosophy of Psychology and Cognitive Science contains 16 essays by leading philosophers of science that illuminate the nature of the theories and explanations used in the investigation of minds Topics discussed include representation mechanisms reduction perception consciousness language emotions neuroscience and evolutionary psychology Comprehensive coverage of philosophy of psychology and cognitive science Distinguished contributors leading philosophers in this area Contributions closely tied to relevant scientific research **Discourse, Tools and Reasoning** Lauren B. Resnick,1997-11-20 To reason is to talk To think is to use tools To learn is to join a community of practice This book explores thought and reasoning as inherently social practices as actions situated in specific environments of demand opportunity and accountability Authors from diverse disciplines psychology sociology artificial intelligence linguistics anthropology examine how people think and learn in settings as diverse as a factory a classroom or an airplane cockpit The tools that people use in these varied settings are both physical technologies and cultural constructions concepts structures of reasoning and forms of discourse This volume in the NATO Special Programme on Advanced Educational Technology is based on an international conference on situated cognition and learning technologies *Situated Cognition* William J. Clancey,1997-08-28 This 1997 book examines recent changes in the design of intelligent machines which afford heightened interactivity with the environment **Socio-Cognitive Dynamics in Strategic Processes** Maren S. D. Breuer,2010 Process related considerations in strategy research and approaches to managerial cognition constitute two highly valuable yet still only limitedly integrated fields of interest in strategic management To fill this void the work starts from a cognitive perspective with the overall aim of examining the emergence of organisational strategies in strategic processes The central research object strategy is thereby conceptualized as shared strategic orientations among an organisation s key actors The existing gap between strategy process research and cognitive strategy research is closed on a conceptual level first by developing and specifying a socio cognitive perspective on strategic processes In recognition of the central importance of social interactions in this context the focus is then set on a specific core forum for strategic activities i e strategic decision making groups In this the nature and the role of social interactions for the developing strategy related knowledge structures is examined first conceptually leading to the development of a socio cognitive model on strategic decision making in groups followed by a qualitative empirical study in this kind of activity forum With its truly

interdisciplinary nature the dissertation is of interest for strategy scholars as it enlarges the pool of knowledge in strategic management both content wise and also method olog ically with the innovative empirical research approach adopted For practitioners contributions are made by detailing the different dimensions of strategic processes and hence sensitizing to important factors for careful overall process designs At the micro level concrete suggestions are derived for composing and instructing strategy teams in such a way as to allow for efficient interchanges during the discussions themselves as well as to enable the effectiveness of these efforts beyond the specific group context and for the performance of the wider organisation

Eriksen, Karen Langsholt

Holmqvist, Bjørn Bandlien, 2020-09-21 The main aim of this book is to discuss various modes of studying and defining the medieval self based on a wide span of sources from medieval Western Scandinavia c 800 1500 such as archeological evidence architecture and art documents literature and runic inscriptions The book engages with major theoretical discussions within the humanities and social sciences such as cultural theory practice theory and cognitive theory The authors investigate how the various approaches to the self influence our own scholarly mindsets and horizons and how they condition what aspects of the medieval self are visible to us Utilizing this insight we aim to propose a more syncretic approach towards the medieval self not in order to substitute excellent models already in existence but in order to foreground the flexibility and the complementarity of the current theories when these are seen in relationship to each other The self and how it relates to its surrounding world and history is a main concern of humanities and social sciences Focusing on the theoretical and methodological flexibility when approaching the medieval self has the potential to raise our awareness of our own position and agency in various social spaces today

Theatre Symposium, Vol. 27 Sarah McCarroll, 2019-10-08 A substantive exploration of bodies and embodiment in

theatre Theatre is inescapably about bodies By definition theatre requires the live bodies of performers in the same space and at the same time as the live bodies of an audience And yet it s hard to talk about bodies We talk about characters we talk about actors we talk about costume and movement But we often approach these as identities or processes layered onto bodies rather than as inescapably entwined with them Bodies on the theatrical stage hold the power of transformation Theatre practitioners scholars and educators must think about what bodies go where onstage and what stories which bodies to tell The essays in Theatre Symposium Volume 27 explore a broad range of issues related to embodiment The volume begins with Rhonda Blair s keynote essay in which she provides an overview of the current cognitive science underpinning our understanding of what it means to be embodied and to talk about embodiment She also provides a set of goals and cautions for theatre artists engaging with the available science on embodiment while issuing a call for the absolute necessity for that engagement given the primacy of the body to the theatrical act The following three essays provide examinations of historical bodies in performance Timothy Pyles works to shift the common textual focus of Racinian scholarship to a more embodied understanding through his examination of the performances of the young female students of the Saint Cyr academy in two of Racine s Biblical plays Shifting forward in time by three centuries Travis Stern s exploration of the auratic celebrity of baseball player Mike Kelly uncovers the ways in which bodies may retain the ghosts of their former selves long after physical ability and wealth are gone Laurence D Smith s investigation of actress Manda Bj rling s performances in Miss Julie provides a model for how cognitive science in this case theories of cognitive blending can be integrated with archival theatrical research and scholarship From scholarship grounded in analysis of historical bodies and embodiment the volume shifts to pedagogical concerns Kaja Amado Dunn s essay on the ways in which careless selection of working texts can inflict embodied harm on students of color issues an imperative call for careful and intentional classroom practice in theatre training programs Cohen Ambrose s theorization of pedagogical cognitive ecologies in which subjects usually taught disparately acting theatre history costume design for example could be approached collaboratively and through embodiment speaks to ways in which this call might be answered Tessa Carr s essay on The Integration of Tuskegee High School brings together ideas of historical bodies and embodiment in the academic theatrical context through an examination of the process of creating a documentary theatre production The final piece in the volume Bridget Sundin s exchange with the ghost of Marlene Dietrich is an imaginative exploration of how it is possible to open the archive to create new spaces for performance scholarship via an interaction with the body
