

SOCIAL LEARNING THEORY

Social learning theory explains how individuals acquire knowledge, attitudes, and behaviors through observation, imitation, and interaction with others.

OVERVIEW

Social learning theory emphasizes the role of observational learning in shaping human behavior. It posits that people learn not only through direct experience but also by observing and modeling the behavior of others. This theory suggests that individuals acquire new skills, attitudes, and values by imitating the actions of role models and by receiving reinforcement based on their observed behaviors.

EXAMPLE

Bonobo Doll Study: This study demonstrated social learning. In the study, children observed either an adult model behaving aggressively towards a doll or an adult engaging in non-aggressive behavior towards the doll. Children exposed to the aggressive model were more likely to imitate the aggressive behaviors with the doll, providing empirical support for SLT.
