Soil Erosion In The Tropics Principles And Management:

Soil Erosion in the Tropics R. Lal, 1990 Filling a need for all soil scientists this comprehensive volume on the problem of soil erosion covers the principles and processes of wind and water erosion with emphasis on the tropics Because soil erosion is the single largest problem in maintaining food production worldwide management practices advocated in this volume will be of significant environmental impact **TABLE OF** Soils of Tropical Forest Ecosystems Andreas Schulte, Daddy Ruhiyat, 2013-03-14 An understanding of the characteristics and the ecology of soils particularly those of forest ecosystems in the humid tropics is central to the development of sustainable forest management systems The present book examines the contribution that forest soil science and forest ecology can make to sustainable land use in the humid tropics Four main issues are addressed characteristics and classification of forest soils chemical and hydrological changes after forest utilization soil fertility management in forest plantations and agroforestry systems as well as ecosystem studies from the dipterocarp forest region of Southeast Asia Additionally case studies include work from Guyana Costa Rica the Philippines Malaysia Australia and Nigeria **Principles of Soil Physics** Rattan Lal, Manoj K. Shukla, 2004-05-28 Principles of Soil Physics examines the impact of the physical mechanical and hydrological properties and processes of soil on agricultural production the environment and sustainable use of natural resources The text incorporates valuable assessment methods graphs problem sets and tables from recent studies performed around the globe and offers an abundance of tables photographs and easy to follow equations in every chapter The book discusses the consequences of soil degradation such as erosion inhibited root development and poor aeration It begins by defining soil physics soil mechanics textural properties and packing arrangements The text continues to discuss the theoretical and practical aspects of soil structure and explain the significance and measurement of bulk density porosity and compaction The authors proceed to clarify soil hydrology topics including hydrologic cycle water movement infiltration modeling soil evaporation and solute transport processes They address the impact of soil temperature on crop growth soil aeration and the processes that lead to the emission of greenhouse gases The final chapters examine the physical properties of gravelly soils and water movement in frozen saline and water repellant soils Reader friendly and up to date Principles of Soil Physics provides unparalleled coverage of issues related to soil physics structure hydrology aeration temperature and analysis and presents practical techniques for maintaining soil quality to ultimately preserve its sustainability Assessing Low-Carbon Development in Nigeria Raffaello Cervigni, Irina Dvorak, John Allen Rogers, 2013-08-05 The Federal Government of Nigeria has adopted an ambitious strategy to make Nigeria the world's 20th largest economy by 2020 This book analyzes options for Nigeria to achieve these development objectives and pursue low carbon development in the sectors agriculture and land use oil and gas power and transport *Low-Carbon Development* Raffaello Cervigni, John Allen Rogers, Max Henrion, 2013-08-05 The Federal Government of Nigeria has adopted an ambitious strategy to make Nigeria the world's 20th largest economy by 2020

Sustaining such a pace of growth will entail rapid expansion of the level of activity in key carbon emitting sectors such as power oil and gas agriculture and transport In the absence of policies to accompany economic growth with a reduced carbon foot print emissions of greenhouse gases could more than double in the next two decades This study finds that there are several options for Nigeria to achieve the development objectives of vision 20 2020 and beyond but stabilizing emissions at 2010 levels and with domestic benefits in the order of 2 percent of GDP These benefits include cheaper and more diversified electricity sources more efficient operation of the oil and gas industry more productive and climate resilient agriculture and better transport services resulting in fuel economies better air quality and reduced congestion The study outlines several actions that the Federal Government could undertake to facilitate the transition towards a low carbon economy including enhanced governance for climate action integration of climate consideration in the Agriculture Transformation Agenda promotion of energy efficiency programs scale up of low carbon technologies in power generation such as renewables an combined cycle gas turbines and enhance vehicle fuel efficiency
