**Soils and Landforms** John Gerrard,1981-01-01      **Soil Geomorphology** J. Gerrard,1992-10-08      **Geopedology** Joseph Alfred Zinck,Graciela Metternicht,Gerardo Bocco,Héctor Francisco Del Valle,2015-12-23 This book offers a proven approach for reliable mapping of soil landscape relationships to derive information for policy planning and management at scales ranging from local to regional It presents the theoretical and conceptual framework of the geopedologic approach and a bulk of applied research showing its application and benefits for knowledge generation relevant to geohazard studies land use conflict analysis land use planning land degradation assessment and land suitability analysis Soil is a vital resource for society at large and an important determinant of the economic status of nations The intensification of natural disasters and the increased land use competition for food and energy have raised awareness of the relevant role the pedosphere plays in natural and anthropogenic environments Recent papers and global initiatives show a renewed interest in soil research and its applications for improved planning and management of this fragile and finite resource      **Geomorphology and Soils** K.S. Richards,R.R. Arnett,S. Ellis,2020-05-11 Soils and sediments influence current processes preserve evidence of past processes indicate evolutionary phases in landscapes and provide a basis for relative and absolute chronologies They provide an important key to the integration of short term process studies and investigation of longer term landform evolution This book first published in 1985 has been arranged to provide wide temporal and spatial coverage with studies ranging from historic to geologic time scales and micro to macro spatial scales The interdisciplinary nature of the subject is reflected in contributions from soil scientists engineering geologists hydrologists and geomorphologists      **Treatise on Geomorphology** ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of

Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned *Soils and Geomorphology* Peter D. *Themes in Biogeography* J. A. Taylor, 2019-10-01 Originally published in 1984 *Themes in Biogeography* presents a broad examination of biogeographical themes extending across the field of plant and animal ecology and geography The book provides a detailed and unique investigation into life and its environment and delves into not just geography and ecology but provides an interdisciplinary look at these areas across both biological and environmental sciences The book examines biogeographical themes applying them to areas of research in soils and climate change as well as in depth studies of plant communities and their animal associates The book also discusses plants and animals through their taxonomic distribution and deals with factors of plant geography using both global and regional examples This book will be of interest to biologists ecologists and geographers alike

**Biogeography** James Allan Taylor, 1984-01-01 *Biogeography* has been one of the great growth areas in geography in recent years with much new research work and many new developments taking place This book presents an authoritative up to date international review of all the major biogeographical themes The chapters define each theme and its place within biogeography and consider the methods of study adopted Each chapter then assesses recent trends and the latest state of the art and concludes by examining where future developments are likely Many case studies and examples are

**Hydropedology** Henry Lin,2012-08-17 Overviews and fundamentals Case studies and applications Advances in modeling mapping and coupling Geocology: An Evolutionary Approach Richard Huggett,2002-09-11 Animals plants and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos On land this rich interaction creates landscape systems or geoecosystems Geocology investigates the structure and function of geoecosystems their components and their environment The author develops a simple dynamic systems model the brash equation to form the conceptual framework for the book suggesting an ecological and evolutionary approach Exploring internal of ecological interactions between geoecosystems and their near surface environments the atmosphere hydrosphere toposphere and

lithosphere and external influences both geological and cosmic Geoecology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings An evolutionary view emerges of geoecological systems and the animals plants and soils comprising them providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein      *Weathering, Soils & Paleosols* I.P. Martini, W. Chesworth, 2013-10-22 For the past 200 years geological scientists have used the present as a key to unlocking the past This volume continues the tradition by exploring the processes of weathering and soil formation as indicators of the present environment of the Earth s land surface Examined are the various ways in which this information can be used to interpret past environments which have produced the soils now preserved as paleosols Because the surface environment of the earth may now be undergoing rapid change the greenhouse effect the book is a timely one for those researchers looking for evidence of analogous changes in the Earth s past The work is divided into three major sections The first deals with fundamental considerations of weathering clay mineralogy and diagenesis The second deals with the formation of soils from various starting materials and in various surficial environments And the final section is an interpretation of paleosols This volume provides valuable reading material for graduate and senior undergraduate courses
