Popoola,Diana-Andra Borca-Tasciuc,2024-03-15 In this industrial and technological age energy plays a principal role in
sustainable development This is connected to issues regarding availability production processes utilization and
environmental impact Due to the increased rate of population growth the energy demand in the entire world is getting to the
level that it may not be sustained in the nearest future if drastic action is not taken to address the situation especially from
research and development perspectives None of the millennium development goals MDGs can be completed without
considerable improvements in the quality and quantity of energy services in developing countries according to the United

medium and high temperature solar processes This book is organized into seven chapters that focus on the second law of
thermodynamics and its use in matching solar collection methods to thermal processes It also provides general design
guidelines for small and intermediate scale applications of solar processes The opening chapter presents an overview of
energy use patterns in the United States and of the various solar thermal processes considered in the book The concepts of
economics of solar systems and possible environmental impacts are also summarized Chapter 2 deals with the quantity
geographic availability and quality of solar radiation with a particular emphasis on beam or direct radiation since it has the
highest thermodynamic availability and is used by most elevated temperature collectors This chapter also describes the
trigonometry of various solar tracking modes and optical properties of materials Chapter 3 considers selected topics on
thermodynamics and heat transfer including various heat engine designs and their first and second law efficiencies radiation
heat transfer and the properties of selective surfaces usable at high temperature Chapter 4 covers the components and
systems for medium temperature processes such as concentrating collectors thermal storage heat exchangers and energy
transport systems Chapter 5 treats systems for power production shaft power industrial process heat and total energy
Chapter 6 presents engineering design data for high temperature collectors and their use in solar furnaces central solar
