written over 23 years The papers are accompanied by illuminating commentary In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses

**How We Learn, how We Remember** Leon N. Cooper, 1995 Leon Cooper's somewhat peripatetic career has resulted in work in quantum field theory superconductivity the quantum theory of measurement as well as the mechanisms that underly learning and memory He has written numerous essays on a variety of subjects as well as a highly regarded introduction to the ideas and methods of physics for non physicists Among the many accolades he has received some deserved one he likes specially is the comment of an anonymous reviewer who characterized him as a nonsense physicist This compilation of papers presents the evolution of his thinking on mechanisms of learning memory storage and higher brain function The first half proceeds from early models of memory and synaptic plasticity to a concrete theory that has been put into detailed correspondence with experiment and leads to the very current exploration of the molecular basis for learning and memory storage The second half outlines his efforts to investigate the properties of neural network systems and to explore to what extent they can be applied to real world problems In all this collection hopefully provides a coherent no nonsense account of a line of research that leads to present investigations into the biological basis for learning and memory storage and the information processing and classification properties of neural systems
