Esteve Selma,Mercedes Lloréns Pascual del Riquelme,2003 El planteamiento de esta obra ha huido expresamente de las clasificaciones tradicionales de recursos naturales como las ligadas a su renovabilidad o capacidad de un recurso natural para regenerarse o no en un tiempo dado Estas clasificaciones que caracterizan o individualizan los recursos uno a uno aunque muy útiles en muchos aspectos suelen presentar algunos problemas cuando se profundiza conceptualmente ya que la mayor parte de los recursos renovables como todos los biológicos pueden dejar de serlo por sobreexplotación a partir de un determinado umbral o los no renovables como muchos minerales pueden mostrar rasgos de renovabilidad inducidos por un reciclaje activo El libro

describe algunos recursos naturales físicos como el agua la energía o los minerales que tienen un tratamiento individualizado por distintas razones pero basa la mayor parte de su contenido en describir sistemas de recursos como los sistemas agrarios los forestales o los costeros El libro se articula en dos partes En primer lugar se estudian los contextos naturales físicos y biológicos humanos la población y su hábitat y económicos la naturaleza económica de los recursos naturales que condicionan el tipo uso y conservación de los recursos en la Región de Murcia En la segunda parte del libro se realiza un análisis de los recursos naturales incluyendo el agua como recurso primordial en zonas ridas y semi ridas otros recursos físicos de carácter estratégico como son los energéticos y mineros y tres sistemas de recursos naturales sujetos a aprovechamientos característicos como son los sistemas agrarios los forestales y el litoral y el medio marino Para finalizar con un capítulo que introduce en las técnicas actuales de evaluación y seguimiento del Medio Natural mediante Teledetección y Sistemas de Información Geográfica
