**Architecture in Transition** Kelly Crossman, 1987-11-01

However behind the public face of design architectural life in Canada during the 1880s and 1890s was in turmoil The Canadian public had lost confidence in its designers students were forced to study abroad to secure a first class education professional rivalry was unscrupulous architectural competitions a scandal American architects and their architecture were the fashion These things changed but not before the world of the Canadian architect had been turned on its head replaced by one which resembled the world of contemporary architects with professional organisations regulated standards formalised education centred in the universities and the belief that Canadian architecture should reflect local climates culture and geography Kelly Crossman provides the first analysis of this period Beginning with a review of the architectural milieu in Toronto and Montreal in the 1880s he traces the rise of professionalism as an idea and architectural nationalism as a goal His analysis is more a history of architectural ideas than a survey of forms It places the architecture of these years in an historical and ideological context demonstrating that it developed with its own logic in response to national and international factors During the two decades after 1885 Canadian architects grappled with problems whose long term implications they could not have foreseen the role of the architect in industrialised society the need to accommodate and integrate applied science and the need to express their own and their country's personality in architectural form By the beginning of this century they had begun to find their own voice The story of this process will be of interest not just to students and scholars but to anyone interested in the development of Canada and its architecture [BoogarLists | Directory of Commercial Architects](#) ,

**Humanitarian Architecture** Esther Charlesworth, 2014-06-27 Never has the demand been so urgent for architects to respond to the design and planning challenges of rebuilding post disaster sites and cities In 2011 more people were displaced by natural disasters 42 million than by wars and armed conflicts And yet the number of architects equipped to deal with rebuilding the aftermath of these floods fires earthquake typhoons and tsunamis is chronically short This book documents and analyses the expanding role for architects in designing projects for communities after the event of a natural disaster The fifteen case studies featured in the body of the book illustrate how architects can use spatial sensibility and integrated problem solving skills to help alleviate both human and natural disasters The cases include Lizzie Babister Department of International Development UK Shigeru Ban Winner of The Pritzker Architecture Prize 2014 Shigeru Ban Architects and Voluntary Architects Network Japan Eric Cesal Disaster Reconstruction and Resiliency Studio and Architecture for Humanity Japan Hsieh Ying Chun Atelier 3 Taiwan Nathaniel Corum Education Outreach and Architecture for Humanity USA Sandra D Urzo Shelter and Settlements and International Federation of the Red Cross and Red Crescent Societies Switzerland Brett Moore World Vision International Australia Michael Murphy MASS Design Group USA David Perkes Gulf Coast Community Design Studio USA Paul Pholeros Healthabitat Australia Patama Roonrakwit Community

Architects for Shelter and Environment Thailand Graham Saunders International Federation of Red Cross and Red Crescent Societies Switzerland Kirtee Shah Ahmedabad Study Action Group India Maggie Stephenson UN HABITAT Haiti Anna Wachtmeister Catholic Organisation for Relief and Redevelopment Aid the Netherlands The interviews and supporting essays show built environment professionals collaborating with post disaster communities as facilitators collaborators and negotiators of land space and shelter rather than as save the world modernists as often portrayed in the design media The goal is social and physical reconstruction as a collaborative process involving a damaged community and its local culture environment and economy not just shelter projects that build houses but leave no economic footprint or longer term community infrastructure What defines and unites the architects interviewed for Humanitarian Architecture is their collective belief that through a consultative process of spatial problem solving the design profession can contribute in a significant way to the complex post disaster challenge of rebuilding a city and its community

The Visibility of Modernization in Architecture Gevork Hartoonian,2023-07-28 This edited collection explores the visibility of modernization in architecture produced in different capitalist regions across the world and provides readers with a historico theoretical and historico geographical discussion Focusing on a particular building type an influential architect s work as well as relevant texts and documents each chapter addresses the many facets of delay which are central to the

problematization of capitalism's progressive dissemination of technological and aesthetic regimes of modernism. This collection underlines the centrality of temporality for a critical understanding of colonialism, modernism, and capitalism. The book is primarily concerned with the historical timeline, the tangential point when a nation enters modernization processes. In exploring modernism in diverse regions such as East Asia, Pacific, Eastern Europe, and Iran, each chapter addresses the historiographic and architectonic unfolding of modernization beyond the western hemisphere. The exploration of these diverse case studies will be of interest to students of architecture and researchers working on the collision of temporalities and the subject's critical importance for different country's built environments. Chapter 13 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.

**Architecture** Thomas Roger Smith, 2024-11-24

THE history, the features, and the most famous examples of European architecture during a period extending from the rise of the Gothic or pointed style in the twelfth century to the general depression which overtook the Renaissance style at the close of the eighteenth form the subject of this little volume. I have endeavoured to adopt as free and simple a mode of treatment as is compatible with the accurate statement of at least the outlines of so very technical a subject. Though it is to be hoped that many professional students of architecture will find this hand book serviceable to them in their elementary studies, it has been my principal endeavour to adapt it to the requirements of those who are preparing for the professional pursuit of the sister arts, and of that large and happily increasing number of students who pursue the fine arts as a necessary part of a complete liberal education, and who know that a solid and comprehensive acquaintance with art, especially if joined to some skill in the use of the pencil, the brush, the modelling tool, or the etching needle, will open sources of pleasure and interest of the most refined description. The broad facts of all art history, the principles which underlie each of the fine arts, and the most precious or most noteworthy examples of each, ought to be familiar to every art student, whatever special branch he may follow. Beyond these limits, I have not attempted to carry this account of Gothic and Renaissance architecture. Within them, I have endeavoured to make the work as complete as the space at my disposal permitted. THE architecture generally known as Gothic, but often described as Christian Pointed, prevailed throughout Europe to the exclusion of every rival for upwards of three centuries, and it is to be met with more or less during two others. Speaking broadly, it may be said that its origin took place in the twelfth century, that the thirteenth was the period of its development, the fourteenth that of its perfection, and the fifteenth that of its decline, while many examples of its employment occur in the sixteenth. In the following chapters, the principal changes in the features of buildings which occurred during the progress of the style in England will be described. Subsequently, the manner in which the different stages of development were reached in different countries will be given. For architecture passed through very nearly the same phases in all European nations, though not quite simultaneously. It must be understood that through the whole Gothic period, growth or at least change was going on; the transitions from one stage to another were only

periods of more rapid change than usual The whole process may be illustrated by the progress of a language If for instance we compare round arched architecture in the eleventh century to the Anglo Saxon form of speech of the time of Alfred the Great and the architecture of the twelfth century to the English of Chaucer that of the thirteenth will correspond to the richer language of Shakespeare that of the fourteenth to the highly polished language of Addison and Pope and that of the fifteenth to the English of our own day We can thus obtain an apt parallel to the gradual change and growth which went on in architecture and we shall find that the oneness of the language in the former case and of the architecture in the latter was maintained throughout For an account of the Christian round arched architecture which preceded Gothic the reader is referred to the companion volume in this series Here it will be only necessary briefly to review the circumstances which went before the appearance of the pointed styles      *Loudon's Architectural Magazine* John Claudius Loudon,1837      Architect

**Architecture in Global Socialism** Łukasz Stanek,2020-01-14 How socialist architects planners and contractors worked collectively to urbanize and develop the Global South during the Soviet era In the course of the Cold War architects planners and construction companies from socialist Eastern Europe engaged in a vibrant collaboration with those in West Africa and the Middle East in order to bring modernization to the developing world Architecture in Global Socialism shows how their collaboration reshaped five cities in the Global South Accra Lagos Baghdad Abu Dhabi and Kuwait City Łukasz Stanek describes how local authorities and professionals in these cities drew on Soviet prefabrication systems Hungarian and Polish planning methods Yugoslav and Bulgarian construction materials Romanian and East German standard designs and manual laborers from across Eastern Europe He explores how the socialist development path was adapted to tropical conditions in Ghana in the 1960s and how Eastern European architectural traditions were given new life in 1970s Nigeria He looks at how the differences between socialist foreign trade and the emerging global construction market were exploited in the Middle East in the closing decades of the Cold War Stanek demonstrates how these and other practices of global cooperation by socialist countries what he calls socialist worldmaking left their enduring mark on urban landscapes in the postcolonial world Featuring an extensive collection of previously unpublished images Architecture in Global Socialism draws on original archival research on four continents and a wealth of in depth interviews This incisive book presents a new understanding of global urbanization and its architecture through the lens of socialist internationalism challenging long held notions about modernization and development in the Global South      *Architecture and Building* ,1897      *The Architectural Magazine*

John Claudius Loudon,1837      **John Mills Van Osdel, Architect, and his Chicago** Burtram Colver Hopkins II, There is no question that Chicago is an architecturally significant city But before Louis Henry Sullivan John Wellborn Root and Frank Lloyd Wright before modernism there lived a man whose designs built it from the ground up Written by his descendant

retired architect Burtram C Hopkins II more than a century later this book traces the incredible mark left on Chicago by architect John Mills Van Osdel a mark tragically largely wiped out by the Great Fire of 1871 From the time he arrived in 1837 to his death in 1891 Van Osdel watched the city swell from a village of around a thousand people to a bustling metropolis of hundreds of thousands Though his name is little known today he played a crucial role in establishing architecture as a discipline in Chicago drafting the Chicago Architect s Code one of the first of its kind laying the groundwork for the skyscrapers that would become the hallmark of the First Chicago School of Architecture and contributing hundreds of architecturally significant structures to the growing urban landscape as well as countless more some still surviving in other parts of Illinois Iowa Indiana Michigan and Arkansas Van Osdel s impact would reverberate in large part through his family many of whom themselves pursued architectural and artistic careers including his nephew and business partner John Mills Van Osdel II This truly encyclopedic book traces this inheritance with a section on Van Osdel II doubling as both an architectural history and a work of family genealogy Vast in scope and exhaustively detailed it is sure to make an invaluable addition to the shelves of anyone interested in this powerhouse of American architecture and his influential family who helped transform Chicago from a frontier town on Lake Michigan to the capital of industry it is today
