The Birds World Nicolae Sfetcu, 2021-10-25 Birds are among the most extensively studied of all animal groups Hundreds of academic journals and thousands of scientists are devoted to bird research while amateur enthusiasts called birdwatchers or more commonly birders probably number in the millions Birds are categorised as a biological class Aves The earliest known species of this class is Archaeopteryx lithographica from the Late Jurassic period According to the most recent consensus Aves and a sister group the order Crocodilia together form a group of unnamed rank the Archosauria Phylogenetically Aves is usually defined as all descendants of the most recent common ancestor of modern birds or of a specific modern bird species like Passer domesticus and Archaeopteryx Modern phylogenies place birds in the dinosaur clade Theropoda Modern birds are divided into two superorders the Paleognathae mostly flightless birds like ostriches and the wildly diverse Neognathae containing all other birds

Feather and Brush Penny Olsen, 2001 This volume traces the 300 year history of bird art in Australia from the crudely illustrated records of the earliest European voyages of discovery to the diversity of artwork available at the start of the 21st century It is a history inseparable from the development of Australian ornithology Against a background of establishment of the country itself naval draftsmen convicts officers settlers naturalists artists and scientists alike contributed both to the art and to science
