Latin American University Students Arthur Liebman,Kenneth N. Multidimensional Aspects of Occupational Segregation Keiko Nakao,2024-04-29 One of the strengths of this book is that it expresses occupational segregation from multidimensional viewpoints using correspondence analysis Through a quantitative approach the book examines occupational segregation by education and gender in response to industrial transformation in Japan and other countries The transformation of industrial structure such as post industrialization demands a reconsideration of traditional perspectives in sociology especially in social stratification

In other words it is a shift from the attribute to the achievement principle Higher technological innovations will create higher levels of industries and those industries will require jobs that need greater human capital In short the meritocracy will be promoted Meritocracy is certainly considered persuasive In fact previous researchers have looked primarily at a person's occupation as a measure of social status In Japan jobs are normally acquired after completing education thus one's educational achievement plays an important role Especially in recent years however education alone has not been enough to explain social status This book therefore focuses on occupational segregation by gender in addition to education in post industrial society Can occupational segregation by gender be weakened in the highly educated group Is this a universal story in modern society Because post industrialization is part of the larger story of modernization international perspectives are needed to examine the linkage between education and gender occupational segregation This book explores occupational segregation by gender in response to industrial transformation in Japan and other countries

Social Mobility Into Post-industrial Society Krzysztof Zagórski (socjologia), 1983 **Social Structure and Social Process** Peter Orleans, Sonya Orleans, 1969 **Social Stratification in an Aging Society with Low Fertility** Sawako Shirahase, 2022-08-31

This edited book empirically discusses stratification in contemporary Japanese society It is unique for its examination of social inequality in relation to declining fertility and an aging population Japan is the most aged society in the world according to the Statistics Bureau of Japan people who are aged 65 and above comprised 29.1% of the country's total population in 2021 Meanwhile the fertility rate has continuously declined since the mid 1970s Japan experienced a dramatic change in its demographic structure in a short period of time Such fast change could be a major factor that generated social stratification In her industrialization Japan was thought to share a pattern of social stratification similar to that of developed European and North American countries but with a low degree of socio economic inequality and a high degree of homogeneity There is no clear support for this description of Japan although the country does share a pattern and degree of social stratification similar to that observed in Europe and North America The social stratification theory has been developed in close relationship to the labor market however it is necessary to further examine the social stratification of very aged societies in which a substantial number of the population namely retired persons no longer have any ties to the labor market In this book the contributors explore the pattern of social stratification at three life stages young middle aged and elderly Included are discussions of various aspects of stratification such as education work wealth marriage family gender generation and social attitudes

Neville Kirk,2025-08-01 The post Chartist period saw an easing of class tensions and the growth of a reformist working class Using evidence based upon the cotton districts of north west England the author shows that enhanced socio political stability owed much to economic restabilisation in his book [The Growth of Working Class Reformism in Mid Victorian England](#) originally published in 1985 This book examines new and neglected areas of investigation including the interplay between class and ethnicity and the institutional and sociological roots of reformism and brings fresh evidence to bear upon more familiar areas of debate such as trends in living standards A materialist explanation of reformism and stability is propounded Central importance is attached to the notion of an increasingly fragmented working class operating in a secure economic system which offered enhanced scope for class manoeuvre and labour s advancement The working class did not become incorporated collaborationist or deferential The frequency of class struggle and continued working class independence could not however conceal the fact that the broad features of the system had been accepted Piecemeal advancement became the order of the day
