Social Viability Of Money Competitive:

The Social Viability of Money Joan Esteban, 2012-12-06 In this book overlapping generations economies are analysed from a game theoretical point of view and the social acceptability of consumption allocations is studied in infinite horizon models of pure exchange economies with agents with finite lifetimes who behave cooperatively. The core of such economies and its relation with competitive equilibria both walrasian and monetary and the essential characteristics of the overlapping generations model are examined. The author defines the problem of trust in intertemporal consumption allocations as a question of belonging or not to the core of economy and provides a full characterization of the core allocations for n goods pure exchange economies with one agent per generation: a consumption allocation belongs to the core if and only if it is Pareto optimal and Sequentially Individually Rational. From this it follows that for one commodity economies no consumption allocation involving intertemporal transfers can belong to the core of the economy. In other words no monetary equilibrium is socially viable. This result is no longer true for many goods models. For that case it is demonstrated that there exist bounds on the real value of equilibrium money purchases beyond which monetary equilibria are not socially viable and with many agents in every generation it is shown that as the economy becomes large and monetary as well as IOU equilibria become eventually excluded from the core of the economy. These results provide an analytical rationale for the fact that in most countries fiat money is legal tender. *The New Palgrave Dictionary of Money and Finance* John Eatwell, Murray Milgate, Peter Newman, 1992-10-14 The first reference work ever to be awarded the Eccles Prize for Excellence in Economic Writing from Columbia Business School. Continuing in the tradition of *The New Palgrave* this 3 volume set provides an unparalleled guide to modern money banking and finance. In over 1 000 substantial essays by leading academic and professional authorities it provides the most comprehensive analysis available of contemporary theory and the fast evolving global monetary and financial framework. In its scope and depth of coverage it is indispensable for the academic and practitioner alike.

Collected Papers Robert J. Aumann, 2000 Robert Aumann's career in game theory has spanned over research from his doctoral dissertation in 1956 to papers as recent as January 1995. Threaded through all of Aumann's work symbolized in his thesis on knots is the study of relationships between different ideas between different phenomena and between ideas and phenomena. When you look closely at one scientific idea writes Aumann you find it hitched to all others. It is these hitches that I have tried to study. The papers are organized in several categories: general knot theory, decision theory, utility and subjective probability, strategic games, coalitional games and mathematical methods. Aumann has written an introduction to each of these groups that briefly describes the content and background of each paper including the motivation and the research process and relates it to other work in the collection and to work by others. There is also a citation index that allows readers to trace the considerable body of literature which cites Aumann's own work. *Unifying Sustainability Information for Societal Automation* Carol Aebi, 2025-02-26 This open access book offers a structured approach that aligns indicators of

social value and provides a stable foundation amidst the dynamic and ever changing social complexities From detailed system scales of participation to an overview of how it works this book presents a roadmap for automating data in systemic alignment with social value With its adaptability to changing societal structures it provides a pragmatic solution within existing systems while paving the way for future advancements It is valuable for researchers and business leaders

Dynamic Macroeconomics with Imperfect Competition Leo Kaas,2012-12-06 This thesis was stimulated throughout the time of my participation in a research project on Dynamic Macroeconomics supported by the German Research Foundation DFG The starting point was the central question of how to integrate price setting firms in a dynamic disequilibrium model Almost all recent literature on imperfect competition in macroeconomics applies the objective demand approach by assuming that firms know the true demand curve they are faced with While this approach can be applied in temporary monetary equilibrium models it proves inadequate for formulating price adjustment in a dynamic disequilibrium model where it has to be replaced by the concept of subjective demand Based on this distinction the thesis starts out with a comparison of the concepts of subjective and objective demand in an abstract framework and surveys the literature on general equilibrium theory with imperfect competition The objective demand approach is criticized not only on the grounds of its strong rationality requirements and existence problems but also by the observation that it cannot be applied successfully to characterize determinate rational expectations equilibria in intertemporal macroeconomics Finally price setting firms using subjective demand functions are integrated in a dynamic disequilibrium model in order to study monopolistic and oligopolistic price adjustment **Journal of Economic Theory** Karl Shell,Jess Benhabib,2003
