Soft Computing In Systems And Control Technology:

Soft Computing in Systems and Control Technology S. G. Tzafestas, 1999 Soft computing is a branch of computing which unlike hard computing can deal with uncertain imprecise and inexact data The three constituents of soft computing are fuzzy logic based computing neurocomputing and genetic algorithms Fuzzy logic contributes the capability of approximate reasoning neurocomputing offers function approximation and learning capabilities and genetic algorithms provide a methodology for systematic random search and optimization These three capabilities are combined in a complementary and synergetic fashion This book presents a cohesive set of contributions dealing with important issues and applications of soft computing in systems and control technology The contributions include state of the art material mathematical developments fresh results and how to do issues Among the problems studied via neural fuzzy neurofuzzy and genetic methodologies are data fusion reinforcement learning approximation properties multichannel imaging signal processing system optimization gaming and several forms of control The book can serve as a reference for researchers and practitioners in the field Readers can find in it a large amount of useful and timely information and thus save considerable effort in searching for other scattered literature Computational Intelligence in Time Series Forecasting Ajoy K.

Palit, Dobrivoje Popovic, 2006-01-04 Foresight in an engineering enterprise can make the difference between success and failure and can be vital to the effective control of industrial systems Applying time series analysis in the on line milieu of most industrial plants has been problematic owing to the time and computational effort required The advent of soft computing tools offers a solution The authors harness the power of intelligent technologies individually and in combination Examples of the particular systems and processes susceptible to each technique are investigated cultivating a comprehensive exposition of the improvements on offer in quality model building and predictive control and the selection of appropriate tools from the plethora available Application oriented engineers in process control manufacturing production industry and research centres will find much to interest them in this book It is suitable for industrial training purposes as well as serving as valuable reference material for experimental researchers **Soft Computing and Intelligent Systems** Madan M.

Gupta, 1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book cover the fundamentals of this emerging field as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems Obstacle Avoidance In Multi-robot Systems, Experiments In Parallel Genetic Algorithms Mark A C Gill, Albert Y Zomaya, 1998-06-17 Obstacle Avoidance in Multi robot Systems Experiments in Parallel Genetic Algorithms offers a novel framework for solving the path planning problem for robot manipulators Simple

and efficient solutions are proposed for the path planning problem based on genetic algorithms. One of the attractive features of genetic algorithms is their ability to solve formidable problems in a robust and straightforward manner. Moreover, genetic algorithms are inherently parallel in nature, which makes them ideal candidates for parallel computing implementations. By combining the robustness of genetic algorithms with the power of parallel computers, this book provides an effective and practical approach to solving path planning problems. The book gives details of implementations that allow a better understanding of the complexities involved in the development of parallel path planning algorithms. The material presented is interdisciplinary in nature; it combines topics from robotics, genetic algorithms, and parallel processing. The book can be used by practitioners and researchers in computer science and engineering.

The proceedings should be of interest to those in the intelligent systems field, such as engineers, researchers, and students.

Fuzzy Systems and Soft Computing in Nuclear Engineering Da Ruan, 2013-11-21. Fuzzy systems and soft computing are new computing techniques that are tolerant to imprecision, uncertainty, and partial truths. Applications of these techniques in nuclear engineering present a tremendous challenge due to its strict nuclear safety regulation. The fields of nuclear engineering, fuzzy systems, and soft computing have nevertheless matured considerably during the last decade. This book presents new application potentials for Fuzzy Systems and Soft Computing in Nuclear Engineering. The root of this book can be traced back to the series of the first, second, and third international workshops on Fuzzy Logic and Intelligent Technologies in Nuclear Science (FUNS) which were successfully held in Mol, September 14-16, 1994; FLINS 94 in Mol, September 25-27, 1996; FLINS 96 and in Antwerp, September 14-16, 1998; FLINS 98. The conferences were organised by the Belgian Nuclear Research Centre SCK-CEN and aimed at bringing together scientists, researchers, and engineers from academia and industry at introducing the principles of fuzzy logic, neural networks, genetic algorithms, and other soft computing methodologies to the field of nuclear engineering and at applying these techniques to complex problem solving within nuclear industry and related research fields. This book, as its title suggests, consists of nuclear engineering applications of fuzzy systems. Chapters 1-10 and soft computing. Chapters 11-21. Nine pertinent chapters are based on the extended version of papers at FLINS 98, and the other 12 chapters are original contributions with up-to-date coverage of fuzzy and soft computing applications by leading

researchers written exclusively for this book
