Pinedo,J. Verweij,2012-12-06 One of the major advances of the last decade concerning the treatment of patients with soft tissue sarcomas is that an increased number of patients are being discussed in multidisciplinary teams prior to the initial treatment The present volume on soft tissue sarcomas in the series Cancer Treatment and Research reflects the multidisciplinary approach with a focus on recent developments The availability of new histopathologic techniques has reduced the number of unclassified sarcomas and has further increased the importance of the histopathologist in providing estimates of the prognosis of the patient as well as

data for the planning of treatment strategy Further data for this strategy will be provided by diagnostic imaging In this field the role of magnetic resonance imaging has been further defined Of utmost importance is the recent trend toward consensus in staging The modification of the staging system of the American Joint Commission for Cancer Staging and End Results Reporting brings the possibility of a single staging system within reach in the next decade As surgery still provides the only chance for cure the importance of being the most sparing as possible is obvious For this reason radiotherapy has been applied with success The introduction of relatively new radiation techniques is therefore being observed with interest

Verweij, H.M. Pinedo, H.D. Suit, 2012-12-06 The previous volume of this series on soft tissue sarcomas highlighted the importance of the multidisciplinary approach to treatment the focus of which is continued in the present edition Proper diagnosis and staging remain the cornerstone of the treatment strategy Sophisticated histopathology techniques and growing consensus on grading systems have further increased the importance of the histopathologist in providing estimates of the prognosis of the patient as well as providing data for the planning of treatment strategy The use of cytogenetics is relatively new in this field This might enable the distinction of subgroups in specific histological tumor types Furthermore molecular biological studies not only help to reveal inherited predispositions and details in oncogenesis in tumor development but they may also provide additional predictive factors for tumor behavior Further data on treatment strategy will be provided by diagnostic imaging a field in which the role of magnetic resonance imaging is rapidly developing As far as actual treatment is concerned surgery still provides the major chance for cure In view of the endeavor to be as sparing as possible the addition of radiotherapy to surgery is of utmost importance Usually radiotherapy is given after surgery but the optimal sequence of the two modalities still needs to be defined The combined use of surgery with radiotherapy and or chemotherapy does have an impact on wound healing Bone Pathology Jasvir S.
