Product-Focused Software Process Improvement Jürgen Münch,2006-06-09 This book constitutes the refereed proceedings of the 7th International Conference on Product Focused Software Process Improvement PROFES 2006 held in Amsterdam June 2006 The volume presents 26 revised full papers and 12 revised short papers together with 6 reports on workshops and tutorials The papers constitute a balanced mix of academic and industrial aspects organized in topical sections on decision support embedded software and system development measurement process improvement and more   Software Maintenance - A Management Perspective Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact   Decision Support in Organizational Transformation Patrick

Humphreys,Sabino Ayestaran,Andrew McCosh,Bill Mayon-White,2013-11-11 The main purpose of this paper is to contribute to the discussion about the design of computer and communication systems that can aid the management process 1 1 Historical Overview We propose that Decision Support System can be considered as a design conception conceived within the computer industry to facilitate the use of computer technology in organisations Keen 1991 This framework built during the late 1970s offers computer and communication technology as support to the decision process which constitutes in this view the core of the management process The DSS framework offers the following capabilities Access ease of use wide variety of data analysis and modelling capacity Technological software gel eration tools Development modes interactive and evolutionary Within this perspective computer and communication technologies are seen as an amplification of the human data processing capabilities which limit the decision process Thus the human being is understood metaphorically as a data processing machine Mental processes are associated with the manipulation of symbols aOO human communication to signal transmission **Effective Software Project Management** Robert K. Wysocki,2010-09-29 Why another book on software project management For some time the fields of project management computer science and software development have been growing rapidly and concurrently Effective support for the enterprise demands the merging of these efforts into a coordinated discipline one that incorporates best practices from both systems development and project management life cycles Robert K Wysocki creates that discipline in this book a ready reference for professionals and consultants as well as a textbook for students of computer information systems and project management By their very nature software projects defy a one size fits all approach In these pages you will learn to apply best practice principles while maintaining the flexibility that s essential for successful software development Learn how to make the planning process fit the need Understand how and why software development must be planned on a certainty to uncertainty continuum Categorize your projects on a four quadrant model Learn when to use each of the five SDPM strategies Linear Incremental Iterative Adaptive and Extreme Explore the benefits of each strategic model and what types of projects it supports best Recognize the activities that go into the Scoping Planning Launching Monitoring Controlling and Closing phases of each strategy Apply this knowledge to the specific projects you manage Get a clear picture of where you are and how to get where you want to go   Innovative Techniques in Instruction Technology, E-learning, E-assessment and Education Magued Iskander,2008-08-20 Innovative Techniques in Instruction Technology E Learning E Assessment and Education is a collection of world class paper articles addressing the following topics 1 E Learning including development of courses and systems for technical and liberal studies programs online laboratories intelligent testing using fuzzy logic evaluation of on line courses in comparison to traditional courses mediation in virtual environments and methods for speaker verification 2 Instruction Technology including internet textbooks pedagogy oriented markup languages graphic design possibilities open source classroom management software automatic email response systems tablet pcs personalization using web mining technology intelligent digital chalkboards virtual room
