Intelligent Information Processing IV Eunikka Mercier-Laurent, David Leake, 2008-09-29 Knowledge existing in modern information systems usually comes from many sources and is mapped in many ways There is a real need for representing knowledge pieces as rather universal objects that should fit to multi purpose a ing systems According to great number of information system s tasks knowledge representation is more or less detailed e g some level of its granularity is sumed The main goal of this paper is to present chosen aspects of expressing granularity of knowledge implemented in intelligent systems One of the main r sons of granularity phenomena is diversification of knowledge sources therefore the next section is devoted to this issue 2 Heterogeneous Knowledge as a Source for Intelligent Systems Knowledge the main element of so called intelligent applications and systems is very often heterogeneous This heterogeneity concerns the origin of knowledge its sources as well as its final forms of presentation In this section the selected c teria of knowledge differentiation will be presented in the context of potential sources of knowledge acquisition In Fig 1 an environment of intelligent systems is shown divided into different knowledge sources for the system Fig 1 Potential knowledge sources for intelligent information reasoning system Source own elaboration based on Mach 2007 p 24

Managing Software Engineering Knowledge Aybüke Aurum, Ross Jeffery, Claes Wohlin, Meliha Handzic, 2013-04-17 Software development is a complex problem solving activity with a high level of uncertainty There are many technical challenges concerning scheduling cost estimation reliability performance etc which are further aggravated by weaknesses such as changing requirements team dynamics and high staff turnover Thus the management of knowledge and experience is a key means of systematic software development and process improvement *Managing Software Engineering Knowledge* illustrates several theoretical examples of this vision and solutions applied to industrial practice It is structured in four parts addressing the motives for knowledge management the concepts and models used in knowledge management for software engineering their application to software engineering and practical guidelines for managing software engineering knowledge This book provides a comprehensive overview of the state of the art and best practice in knowledge management applied to software engineering While researchers and graduate students will benefit from the interdisciplinary approach leading to basic frameworks and methodologies professional software developers and project managers will also profit from industrial experience reports and practical guidelines

Advances in Software Engineering Hakan Erdogmus, Oryal Tanir, 2013-03-20 Software engineering is a rapidly growing and changing field Over the last decade it has gained significant popularity and it is now heralded as a discipline of its own This edited collection presents recent advances in software engineering in the areas of evolution comprehension and evaluation The theme of the book addresses the increasing need to understand and assess software systems in order to measure their quality maintain them adapt them to changing requirements and technology and migrate them to new platforms This need can be satisfied by

studying how software systems are built and maintained by finding new paradigms and by building new tools to support the activities involved in developing contemporary software systems The contributions to the book are from major results and findings of leading researchers under the mandate of the Consortium for Software Engineering Research CSER CSER has been in existence since 1996 The five founding industrial and academic partners wanted to create a research environment that would appeal to the applied nature of the industrial partners as well as to advance the state of the art and develop fresh expertise The research projects of the Consortium are partially funded by the industrial partners and partially by the Natural Sciences and Engineering Research Council of Canada Technical and administrative management of the Consortium is provided by the National Research Council of Canada specifically by members of the Software Engineering Group of the Institute for Information Technology
