Soil Processes and the Carbon Cycle Rattan Lal, John M. Kimble, Ronald F. Follett, Bobby A. Stewart, 1997-11-25 World soils contain about 1500 gigatons of organic carbon This large carbon reserve can increase atmospheric concentrations of CO₂ by soil misuse or mismanagement or it can reverse the greenhouse effect by judicious land use and proper soil management *Soil Processes and the Carbon Cycle* describes soil processes and their effects on the global carbon cycle while relating soil properties to soil quality and potential and actual carbon reserves in the soil In addition this book deals with modeling the carbon cycle in soil and with methods of soil carbon determinations *Soil Processes and the Carbon Cycle* Rattan Lal, John M. The Potential of U.S. Grazing Lands to Sequester Carbon and Mitigate the Greenhouse Effect Ronald F. Follett, John M. Kimble, 2000-09-15 Grazing lands represent the largest and most diverse land resource taking up over half the earth's land surface The large area grazing land occupies its diversity of climates and soils and the potential to improve its use and productivity all contribute to its importance for sequestering C and mitigating the greenhouse effect and other condition

Soil Erosion and Carbon Dynamics Eric J. Roose, Rattan Lal, Christian Feller, Bernard Barthes, 2005-12-09 The most complete nonpartisan source of information on this hot agronomic topic available today this book brings together a diverse group of papers and data to resolve the debate between sedimentologists and soil scientists and agronomists over whether the effects of soil erosion on carbon and atmospheric CO₂ is beneficial or destructive

Storing Carbon in Agricultural Soils Norman J. Rosenberg, Roberto C. Izaurralde, 2013-03-09 Soil carbon sequestration can play a strategic role in controlling the increase of CO₂ in the atmosphere and thereby help mitigate climatic change There are scientific opportunities to increase the capacity of soils to store carbon and remove it from circulation for longer periods of time The vast areas of degraded and desertified lands throughout the world offer great potential for the sequestration of very large quantities of carbon If credits are to be bought and sold for carbon storage quick and inexpensive instruments and methods will be needed to monitor and verify that carbon is actually being added and maintained in soils Large scale soil carbon sequestration projects pose economic and social problems that need to be explored This book focuses on scientific and implementation issues that need to be addressed in order to advance the discipline of carbon sequestration from theory to reality The main issues discussed in the book are broad and cover aspects of basic science monitoring and implementation The opportunity to restore productivity of degraded lands through carbon sequestration is examined in detail This book will be of special interest to professionals in agronomy soil science and climatology

Fire, Climate Change, and Carbon Cycling in the Boreal Forest Eric S. Kasischke, Brian J. Stocks, 2012-08-22 In boreal forests which contain large amounts of the world's terrestrial organic carbon fire is a natural and fundamental disturbance regime essential in controlling many ecosystem processes As a result of predicted climate change in the future the fire regime and consequently the forest cover and carbon storage of boreal regions will undergo dramatic alterations This volume discusses the direct and indirect mechanisms by which fire and climate interact to influence carbon cycling in North American boreal forests The first section summarizes the information needed to understand and manage fire's effects on the ecology of boreal forests and its influence on global climate change issues Following chapters discuss in detail the role of fire in the ecology of boreal forests

Subsequent sections present data sets on fire and the distribution of carbon discuss the use of satellite imagery in monitoring these regions and discuss approaches to modeling the relevant processes The book offers the following new results improved estimates of carbon released during fires at a variety of scales from individual sites to the entire North American boreal forest region direct evidence of enhanced soil respiration after fire in Alaskan boreal forests studies of the influence of fire on long term forest succession patterns modeling results of the effects of climate warming on the fire regime examples of the use of satellite imagery to monitor surface characteristics important in carbon cycling modeling results of how climate change will interact with the fire regime to influence carbon storage

Climate Change Impacts on Soil Processes and Ecosystem Properties, 2018-10-04 Climate Change Impacts on Soil Processes and Ecosystem Properties Volume 35 presents current and emerging soil science research in the areas of soil processes and climate change while also evaluating future research needs The book combines the five areas of soil science microbiology physics fertility pedology and chemistry to give a comprehensive assessment This integration of topics is rarely done in a single publication due to the disciplinary nature of the soil science areas Users will find it to be a comprehensive resource on the topic Provides an analysis of all areas of soil science in the context of climate change impact on soil processes and ecosystem properties Presents information that is displayed in an accessible form for practitioners and disciplines outside of soil science Contains a concluding section in each chapter which assesses key areas Includes a discussion on future research directions

Soils and Global Change John M. Kimble, Elissa R. Levine, Bobby A. Stewart, 1995-03-23 The pedosphere the thin mantle of soil on the earth's surface plays a potentially crucial role in climate and climate change The carbon storage of soils is the second largest in the biosphere making the dynamics of soil organic carbon an important issue that must be

understood if we are to fully comprehend global change This new book examines the importance of soils and their relationship to global change specifically to the greenhouse effect Soils and Global Change presents a state of the art compendium of our present knowledge of soils This up to date information source enables readers to delve into the literature about soils and climate change and examine soils in both natural and managed environments *Assessment Methods for Soil Carbon* John M. Kimble, Ronald F. Follett, Bobby A. Stewart, 2000-12-28 Since carbon sequestration in soils reduces the amount of carbon available to the atmosphere the Kyoto Protocols have heightened interest in soil carbon pools and their effect on carbon fluxes *Assessment Methods for Soil Carbon* addresses many of the questions related to the measurement monitoring and verification of organic and inorganic carbon in soils The major topics covered are carbon pools soil sampling and preparation analytical techniques for soil carbon soil erosion and sedimentation remote sensing GIS and modeling procedures for scaling carbon data from point and local measurements to regional and even national scales and economic and policy issues In *Assessment Methods for Soil Carbon* leading researchers show that we now have the ability to measure monitor and verify changes to soil carbon The book establishes the need for standardized methods that can be used by anyone and helps us better understand the link between the pedosphere soils and the atmosphere It also shows the importance of developing links between the economics of carbon sequestration and the amounts sequestered and highlights the need for scientists and policy makers to interact to ensure that policies fit within the scope of present technologies
