**Omics Insights in Environmental Bioremediation** Vineet Kumar, Indu Shekhar Thakur, 2022-09-26. Environmental pollution emanating from rapid industrialization, population growth and urbanization has been considered a major problem in recent years that affects biodiversity, ecosystems and human health by contaminating soil and water. This book brings out a comprehensive collection of information on valuable insights into different cutting edge omics technologies such as metagenomics, metatranscriptomics, metaproteomics and metabolomics along with advanced next generation sequencing technologies as well as bioinformatic tools which led to a better understanding of microbial communities and their adaptability to a wide range of contaminants and underlying their mechanisms in bioremediation and biodegradation of environmental pollutants. In addition, this edited volume provides critical insight into potent microbial communities endowed with unique functional attributes through their unique metabolism catalyzed by signature enzymes and degradation pathways. Step by step descriptions are provided of various microbial metabolic pathways of degradation and biotransformation of environmental contaminants by numerous illustrations which make the information easier to understand for the readers. Each chapter is devoted to selected examples of microbial bioremediation supported by tables and an extensive list of references for readers interested in learning further details about the subject matter. This book is of interest to teachers, researchers, professionals, policymakers, stockholders, practitioners, environmental engineers, soil scientists and policymakers. In addition, the book serves as additional comprehensive material for undergraduate, graduate and doctoral students who require a working knowledge and knowhow of Omics involved in and required for environmental remediation.
