Jackson, Colin R. Black, 2013-06-29 Books dealing with climatic change are commonplace as are those concerned with effects of environmental stresses on plants The present volume distinguishes itself from earlier publications by highlighting several interrelated environmental stresses that are changing in intensity as the climate warms in response to the accumulation of greenhouse gases The stresses examined at the NATO Advanced Research Workshop upon which this book is based include atmospheric pollutants flooding and submergence drought and cold In future successful farming or landscape management will ultimately depend on strategies that offset the effects of these and other environmental constraints while exploiting more favourable features However the predicted speed of climate change may exceed the rate at which new approaches farming forestry landscape management and genetic conservation can be developed through experience and retroactive response The alternative is to anticipate future needs and thus identify appropriate management and legislative strategies by research and discussion The contents of this volume contribute to these vital processes upon which the productivity of agroecosystems and conservation of natural ecosystems may increasingly depend Those with any lingering doubts concerning the gravity of the likely future situation are especially encouraged to read the opening chapter For convenience chapters discussing pollution flooding drought and cold are grouped in separate sections However many authors have taken care to emphasise that interactions between the changing combinations of stresses pose particular problems for plants and plant communities *The Ecology and Management of Wetlands* Donal D. Shear, 2012-12-06 This book contains the proceedings of a symposium held at the College

of Charleston Charleston South Carolina USA 16 20 June 1986 The seed for this symposium arose from a group of physiologists soU scientists and biochemists that met in Leningrad USSR in July 1975 at the 12th Botanical Conference in a Session organized by Professor B B Vartepetian This group and others later conspired to contribute to a book entitled Plant Life in Anaerobic Environments eds D D Hook and R M M Crawford Ann Arbor Science 1978 Several contributors to the book suggested in 1983 that a broad scoped symposium on wetlands would be useful a in facilitating communication among the diverse research groups involved in wetlands research b in bringing researchers and managers together and c in presenting a comprehensive and balanced coverage on the status of ecology and management of wetlands from a global perspective With this encouragement the senior editor organized a Planning Committee that encompassed expertise from many disciplines of wetland scientists and managers This Committee with input from their colleagues around the world organized a symposium that addressed almost every aspect of wetland ecology and management

Handbook of Environmental Physiology of Fruit Crops Bruce Schaffer, Peter C. Andersen, 2018-05-04 These exciting new companion handbooks are the only ones of their kind devoted solely to the effects of environmental variables on the physiology of the world's major fruit and nut crops Their cosmopolitan scope includes chapters on tropical and temperate zone species written by scientists from several continents The influence of environmental factors such as irradiance temperature water and salinity on plant physiology and on vegetative and reproductive growth is comprehensively discussed for each crop In addition to being a thorough and up to date set of textbooks the organization of the two volumes makes them an excellent reference tool Each chapter focuses on a single crop or a group of genetically or horticulturally related crop and is appropriately divided into subsections that address individual environmental factors Some chapters emphasize whole plant physiology and plant growth and development while other chapters feature theoretical aspects of plant physiology Several chapters provide botanical background discussions to enhance understanding of the crop's response to its environment

Water Relations of Plants and Soils Paul J. Kramer, John S. Boyer, 1995-07-28 Water Relations of Plants and Soils successor to the seminal 1983 book by Paul Kramer covers the entire field of water relations using current concepts and consistent terminology Emphasis is on the interdependence of processes including rate of water absorption rate of transpiration resistance to water flow into roots soil factors affecting water availability New trends in the field such as the consideration of roots rather than leaves as the primary sensors of water stress are examined in detail Addresses the role of water in the whole range of plant activities Describes molecular mechanisms of water action in the context of whole plants Synthesizes recent scientific findings Relates current concepts to agriculture and ecology Provides a summary of methods

Increasing food production worldwide has become a major issue in the 21st century Stagnation in grain yield of important food crops in recent years in developed as well as developing countries has contributed to a sharp increase in food prices Furthermore higher grain yield will be needed in the future to feed a burgeoning world population with a rising standard of living that requires more grain per capita Technologies that enhance productivity ensure environmental safety and conserve natural resources are required to meet this challenge

The Architecture and Biology of Soils Karl Ritz, 2011 Soil is a fundamental and critical yet often overlooked component of terrestrial ecosystems It is an extremely complex environment supporting levels of diversity far greater than any ecosystem above ground This book explores how soil structure develops and the consequences this has for life underground The effects of spatial arrangement of soil's physical and biological components on their interaction and function are used to demonstrate their roles in ecosystem dynamics

Handbook of Photosynthesis Mohammad Pessarakli, 2005-03-29 Quite naturally photosynthesis has achieved massive amounts of attention in recent years Aside from being the most spectacular physiological process in plant growth it is actually the key to our dealing with the potentially cataclysmic accumulation of carbon dioxide in the earth's atmosphere Unfortunately while information is plentiful all this attention has resulted in a scattered database on photosynthesis with no contemporary starting point at least until now With the second edition of the Handbook of Photosynthesis Mohammad Pessarakli once again fills the need for an authoritative and balanced resource by assembling a team of experts from across the globe Together they have created a comprehensive reference that in a single volume includes important background information as well as the most recent research findings on photosynthesis Completely Revised with Several New Chapters The handbook a completely updated reworking of the critically acclaimed first edition details all of the photosynthetic factors and processes under both normal and stressful conditions covering lower and higher plants as well as related biochemistry and plant molecular biology Divided into fourteen sections for ease of reference with nearly 8000 bibliographic citations the handbook contains authoritative contributions

from over 80 scientists It includes approximately 500 drawings photographs tables and equations all designed to reinforce and clarify important text material

Enhancing Agricultural Water Management: Techniques for Improving Crop Water Efficiency and Sustainability Qi Wu,Junying Chen,Emmanuel Arthur ,Hanmi Zhou,2025-08-22 Research on crop water requirements is pivotal for precision irrigation and agricultural water conservation Various farm management techniques such as deficit irrigation with optimized water allocation various irrigation methods sprinkler drip and micro sprinkler irrigation and biological water saving technologies significantly influence the pattern of crop water demand The application of these technologies exhibits spatial variability For example water use efficiency at the field scale might exceed that at the irrigation district scale where irrigation practices are more precision oriented thereby affecting water use efficiency from a broader perspective Understanding and applying advanced water management techniques enables farmers to adjust their practices for more efficient water use ultimately leading to more resilient and sustainable agricultural practices Therefore it is crucial to study the impact of various agricultural irrigation and fertigation techniques on crop water demand water physiology and water use efficiency to enhance crop resistance to water shortage and improve water use efficiency The objective of this research topic is to explore the impacts of varying water and fertilizer management strategies particularly with the integration of innovative technologies across different scales on crop water demands water related physiological functions crop growth dynamics and their role in enhancing crop resilience This investigation will cover the extensive physiological adaptations of crops to these strategies examining the consequences of diverse irrigation and fertilization coupling modes at the field level on crop water use and physiological functions alongside the evaluation of crop water related physiological processes at the irrigation district magnitude This Research Topic aims to report recent breakthroughs in the deployment of novel water and fertilizer management strategies or models within plant sciences Authors are welcome to submit related to but not limited to the following topics Response mechanisms of crops to novel water and fertilizer management technologies Physiological responses of crops to water productivity under deficit irrigation Variability and precise control of crop water efficient utilization at large scale Impact of coupled water and fertilizer management on soil crop interactions Impact of changing weather patterns on crop water and nutrient requirements Implementation of smart farming technologies in water and fertilizer application Water use efficiency and irrigation practices Models for managing water and fertilizer
